General objective 29
Session 1.1.Purpose and definition on communication, collaboration and team-working 30
1.1.1. Purpose and definition on communication, collaboration and team-working 30
1.1.2. The importance/purpose of effective communication, teamwork, and collaboration in health care 32
Session 1.2: Challenges/barriers and solution for effective communication, collaboration, and Team-working in health setting 33
Session 1.3: Challenges/barriers and solution for effective communication, collaboration, and Team-working in health setting ..... **Error! Bookmark not defined.**
1.2.1: Use of Outdated communication channels 34
1.2.2: Lack of focus on internal communication 34
1.2.3: Limited technological aptitude 34
1.2.4: High-pressure environment 34
Session 1.4: Solution for improving current health professional communication, collaboration, and team-working gap 35
1.4.1: Assess your current situation 35
1.4.2: Form an internal communication strategy 36
1.4.3: Use technology to streamline communication 36
Chapter Two: - Communication 37
Session 2.1: Principles of communication 38
2.1.1: Purpose and Definition of communication 39
2.1.2: Characteristics of communication include: 40
2.1.3: Approaches to (types of) Communication 41
2.1.3: One-way communication 41
2.1.4: Two-way communication 42
Session 2.2: Forms of Communicating 42
2.2.1: Verbal Communication 42
2.2.2: Non-Verbal 44
2.2.3: Characteristics of Effective Communication 45

2.2.4: Session Summary 46
Session 2.3: Communication process or elements of communication 47
2.3.1: Communication process or elements of communication 47
2.3.2: Importance of Effective Communication (Patient, Family, Medicine) 48
2.3.3: Communication in Conflict Resolution 49
Session 2.3: Challenge and proposed solutions of effective communication in health setting 51
2.3.4: Challenges/ barriers / of Effective Communication 51
Chapter three: - Collaboration 56
Session 3:1 Introduction to effective collaboration 57
3.1.1: Effective collaboration 58
3.1.2: Five tips for collaborating effectively 58
3.1.3. Guidelines for Effective Collaboration 59
3.1.4: Principles of effective collaboration 60
Session 3.2: Type of Collaboration 62
3.2.1: Internal collaboration 63
3.2.1: Stage/elements of collaboration 67
3.2.3: Elements of Successful Collaboration 68
3.3.4: Importance of successful collaboration (Benefits of effective collaboration in an organization) 69
3.2.5: Current challenge 71
Chapter 4:- Team-working 73
Session 4.1: Introduction and principles of team working 74
4.1.1: Introduction and principles of team-working 74
4.1.2: Principle of team-working 75
Session 4.2: Type of team-working 77
4.2.1: Type of team-working 78
Session 4.3: Component/stage of and Importance of successful Team-work 81
4.3.1: Component/stage and Importance of successful Team-work 81
4.3.2: Importance of successful team working 85
4.3.3: Challenges and solutions to successful team-work 85
Chapter five: special issues in communication, collaboration, and team-working 90
Session 5.1: Overview of special issue (introduction and principles) 90
5.1.1: What makes a great leader? 91
5.1.2: Importance of teamwork and leadership 92

5.1.3: Characteristics of a good leader 93
Session 5.2: Leadership challenge/issue during communication collaboration and team-working 97
5. 2.1: General Leadership challenge/issue during communication collaboration and team-working 98
5.2.2 Leadership Issues on Effective Communication 99
5.2.3: Leadership Issues on Effective Communication 100
5.2.4: Leadership Issues on Team Work 105
5.2.5: Leadership Issues on Collaboration 110
5.2.6: Leadership Issues on Collaboration 111
Session 5.3: Tools or protocols for effective communication, for team working, for Collaboration: 115
Session 5.4: Monitoring and evaluating during communication collaboration and team working: 118
5.4.1: Monitoring and evaluation during team working 118
5.4.2: Monitoring and evaluating during team effective communication: 119
5.4.3: Monitoring and evaluating during team collaboration: 120

EAA - Ethiopian Anesthetists Association

TCC – Teamwork, Communication and Collaboration

Foreword

The Ethiopian Association of Anesthetists recognizes the vital importance of teamwork, communication and collaboration when providing safe and effective anesthesia care to our patients. We understand that to achieve success in these areas, continuous professional development is essential.

Through the development of this training manual, we aim to create a framework for continuous learning and improvement in teamwork, communication and collaboration for anesthetists across Ethiopia. This manual will provide practical guidance, strategies and tools that can be applied in a variety of clinical settings, and will be relevant to anesthetists at all stages of their career.

Our training manual will be based on evidence-based best practice and will be informed by the experiences and expertise of our members. It will cover topics such as effective communication, conflict resolution, team building, and leadership, as they relate to anesthesia care.

We believe that this training manual will be an important resource for anesthetists who seek to improve their teamwork, communication and collaboration skills, and will ultimately help to improve the quality and safety of anesthesia care across Ethiopia. We remain committed to supporting our members in their professional development journey and to promoting excellence in anesthesia care.

Sincerely

Siraj Ahmed

EAA president

This CPD program/manual was made possible by the generous support of the American people through the United States Agency for International Development funded Health Workforce Improvement Program (HWIP) under the terms of the Cooperative Agreement No. 72066320CA00008. The contents are the responsibility of the Ethiopian Association of Anesthetists and do not necessarily reflect the views of USAID or the United States Government.

Introduction to the manual

Communication, Collaboration and Team working training is a 4 day course designed to equip health Professionals (Anesthetists, Nurses, Midwife, Physicians) working in health teaching and service delivery institutions to fill gaps that existed among health professionals and customers and increase core competencies of health professionals in the area of Effective communication, collaboration and team working during perioperative patient care in health and education of health science students in health teaching institutions.

Communication, collaboration, and teamwork is a core and essential health professional competencies in the current health care practice that help improve patient care outcomes through fostering effective and efficient advocacy and counseling strategy

Communication is the process of exchanging information and meaning between or among individuals through a common system of symbols, signs, and behavior.

A team is a collection of two or more people who interact with each other and perceive themselves to share some common interests or to accomplish a certain activity.

Teamwork is a special ability to work together towards a common vision and/or individuals working together to accomplish more than what they could do alone. Here it is important to put one quote to elaborate more about teamwork "Talent wins games, but teamwork wins championship", Michael Jordan's quote, thus there is no I in teamwork.

Collaboration: When it comes to defining collaboration, ''for a concept so widely used in everyday language, there is a surprising lack of a clear understanding of what it is to collaborate, and of how best to support and improve collaborative working. Some definitions in the literature indicate that collaboration

- Involves multiple people interacting to achieve a common goal
- Active and ongoing partnership between professionals and institutions with diverse backgrounds and mandates who work together to provide services
- Process that involves cooperation, communication, negotiation, trust, respect, and understanding to build a synergistic alliance that maximizes the contributions of each participant
- Involves constructing both a collective action to address complex patient needs and an inter professional team relationship involving respect and trust

- Process of working together, negotiating agreement and managing conflict, and both valuing and understanding one another
- Involves working together, shared planning over time, functioning cooperatively as colleagues and equals with respect and a view to find solutions together

Thus the definitions of collaboration suggest that it is an integration of activities and knowledge that requires a partnership of shared authority and responsibility with four critical elements described by Sullivan

- **Coordination** (working to achieve shared goals)
- **Cooperation** (contributing to the team, understanding and valuing the contributions of other team members)
- **Shared decision-making** (relying on negotiation, communication, openness, trust, and a respectful power balance)
- **Partnerships** (open, respectful relationships cultivated over time in which all members work equitably together)

The importance of effective communication, teamwork, and collaboration in health care is seen in terms of patient adherence to health professional counseling, improved customer satisfaction with delivered health care service, improved health care service outcomes, and reduced morbidity, and mortality.

Evidence shows, in the current healthcare practice, institutions that foster effective communication, good team working skills, and collaboration with their customers in their day-to-day routine healthcare service achieve good patient trust and everlasting results for their community.

Effective communication in health care service delivery also has a treatment component for hypertensive, patients with heart disease and endocrine disorders through reducing stress.

The aim of this communication, team working, and Collaboration course participant manual is to provide participants with the required skill and guidance needed for and Additional information, tools, and resources to fill gaps in knowledge and skill on effective communication, team working and collaboration for health professionals working in the perioperative hospital setting.

The manual is organized into 5 module chapters to cover the most relevant basic component of communication, team working, and collaboration in perioperative health care delivery in health institutions and based on identified training needs assessment.

The module is designed to consider the specific needs of the adult learner. In keeping with this, it will comprise a range of teaching modalities to include skill sessions, scenarios, demonstrations, discussions, and interactive lectures. The course was developed by the Ethiopian Anesthetists Association (EAA) in collaboration with the Jhpiego Ethiopia health workforce improvement program.

Rationale

Health professionals must maintain good communication, successful collaboration and effective Team work, and assuming complementary roles and cooperatively working together, sharing responsibility for problem-solving and making decisions to formulate and carry out plans for patient care.

Collaboration between all health care providers increases team members' awareness of each other's' type of knowledge and skills, leading to continued improvement in decision-making. And to improve patient out come and continuously to refines its communication skills.

In the current era evidence shows that communication, collaboration and team-working among health professionals is a big gap and barrier to achieve goal of organizations,.

Effective communication, collaboration and team working is very vital to Reduce medical errors, Increase patient safety, and Improve patient mortality rates. It also leads to better staff outcomes including reduced stress improved job satisfaction that helps to achieve organizational goal. Thus it is a must to maintain good competency on it through continuous update and training.

The core competency of this manual

- Develop skills in effective communication with colleagues and patients, including cultural and linguistic competency and communication in high-stress situations
- Learn different conflict resolution strategies and how to apply them in the healthcare setting
- Understand the role of interdisciplinary collaboration in patient care and how to build and maintain effective interdisciplinary teams
- Identify the characteristics of high-performing teams and how to foster a culture of teamwork in the workplace

- Apply strategy to overcome effective communication collaboration and team working barriers
- Develop tools/protocols for effective communication, collaboration, and teamwork in a healthcare setting

Course Syllabus

Module name: **Teamwork, Communication, and Collaboration in Health Care Setting**

Module code: _____

Module duration: _____

Pre-requite: There is no prerequisite

Module continuing education unit (CEU): _____

Course Description: This --- days training course is designed to equip participants with the knowledge, skill, and attitude on basic effective communication, team working, and collaboration for health professionals that help to deliver scientifically acceptable perioperative health care service for needy patients. The course focuses on basic concepts of effective communication, collaboration, and team working for efficient and successful patient care delivery. It mainly deals with the definition of effective communication, collaboration, and team working, the basic principles of effective communication, collaboration, and team working, the type of communication, the benefit of effective communication, collaboration, and teamwork, and barriers to effective communication, collaboration and team working in the health care setting.

The goal of the course: To provide participants with the required competency in the area of effective communication, collaboration, and teamwork needed to improve the quality of perioperative health care delivery at the health facility

Learning Objectives

At the end of this training course module, the participant will be able to;

- Define communication, collaboration, and teamwork in a healthcare setting
- Determine basic principles of effective communication, collaboration, and teamwork
- Identify components of effective communication, collaboration, and teamwork
- Demonstrate effective communication, collaboration, and teamwork in a healthcare setting
- Develop the skill of effective communication in conflict resolution
- Apply basic principles of communication, collaboration, and teamwork
- Discuss the different types of communication skills required while delivering health care for perioperative patients

- Apply strategy to overcome effective communication collaboration and team working barriers
- Develop tools/protocols for effective communication, collaboration, and teamwork in a healthcare setting
- Analyze the importance of communication, collaboration, and teamwork in perioperative patient care

Chapters/sessions outline

Chapter	Title /topic	Duration	Sessions
Chapter 1	Introduction	300'	Introduction to the manual Session 1.1:Purpose and definition on communication, collaboration and team-working Session 1.2: Challenges/barriers and solution for effective communication, collaboration, and Team-working in health setting Session 1.3: Solution for improving current health professional communication, collaboration, and team-working gap
Chapter 2	Communication	270'	Session 2.1: Principles of communication Session 2.2: Forms of Communication Session 2.3: Communication process or elements of communication
Chapter 3	Collaboration	180	Session 3:1 Introduction to effective collaboration Session 3.2: Type of Collaboration
Chapter 4	Team working	180	Session 4.1: Introduction and principles of team working

			Session 4.3: Component/stage of and Importance of successful Team-work
chapter 5	Special issues during communication, collaboration, and team working	180’	Session 5.1: Overview of special issue (introduction and principles) Session 5.2: Leadership challenge/issue during communication collaboration and team-working
	Basic Facilitation Technique	180’	Session 1: Introduction to Facilitation Techniques Session 2: Communication Skills for Facilitation Session 3: Planning and Preparation for Facilitation
	Teach back Session	180’	1. Introduction to teamwork, communication, and collaboration 2. Benefits of effective teamwork 3. Understanding different communication styles 4. Barriers to effective communication 5. Active listening and empathetic communication 6. Importance of clear communication in team 7. Tools and techniques for effective collaboration 8. Team building activities 9. Conflict resolution

			10. Strategies to manage difficult team members 11. Developing a culture of teamwork and collaboration 12. Personal action plans for improving teamwork and collaboration skills.

Participants Selection criteria

- All Healthcare professionals working at the healthcare institution and healthcare administrative bureaus

Facilitator/ trainer selection criteria

Facilitators will be those who have undertaken a trainer's course and will be selected from

- TWG of EAA who developed this training manual
- TOT training on Effective communication, collaboration, and teamwork
- Basic training on Effective communication, collaboration, and teamwork with basic facilitation skill training

Training Method:

- Illustrated lectures
- Case Studies
- Group exercise
- Individual reflection
- Role play /simulation
- Guided practical activities / systematic reflection

Training materials and resource

- Participants Manual
- Facilitator's guide trainer
- PPT
- Flip chart
- Whiteboard markers
- Laptop
- LCD projector
- Video and expert on communication skill

Method of Evaluation

Formative evaluation

- Pretest
- Daily evaluations
- Checking participants' understanding of principles during presentations and learner

Activities

Summative evaluation

- Post-test
- End course evaluation
- Participant reaction
- Group and individual assignment and protocol development
- Individual learning plans

Course evaluation

- End-of-course evaluation

- Participants Feedback

Course Duration

- ---------- days

Suggested Course Composition

- A maximum of 30 health professionals with health professional qualification
- Number of trainers - -----

Training Venue: Accredited CPD Provider

Course Schedule

Time	Day 1	Day 2	Day3	Day 4
2:30-3:30	• Welcome by an invited guest • Participant registration • Self-introduction and setting expectation	• Recap • Interactive lecture on Barriers of effective communication(environmental and personal) • Solutions for communication barriers Group discussion and presentation on • Barriers and solution	• Recap Group presentation on given case scenario analysis • Team and team working • Principle of the team working • component of successful teamwork • type of team	Recap Lecture on • Leadership and management during effective communication • Role play – on effective communication during leadership and management in a health setting

			• Importance of teamwork in healthcare	• Presentation
3:30-4:30	• General overview Introduction about the training (goal, material, method, logistics) • Overview structure and methodology of training • Pretest administration	Group discussion, Interactive lecture on • Effective collaboration • Stages /elements of collaboration • Importance of successful collaboration in healthcare • Common Barriers to Inter-professional Communication and Collaboration	Group work and presentation on • Barriers to successful teamwork • Solutions for successful teamwork barriers Solutions for successful teamwork barriers	• Con…Role play – on effective communication during leadership and management in a health setting • Presentation

Chapter One: - Introduction

Duration:-180'

Description:-This chapter deals with the general introduction or definition of terms and an overview of effective communication, collaboration, and team-working, current challenges that affect healthcare professional communication, and solutions to the challenge observed during health professionals' communication in different levels of health settings at the current era

General objective

At the end of this chapter, the participant will be able to:-

- Identify the purpose, common challenges during health professional communication, and solutions for the observed communication, collaboration, and team-working challenges.

Specific objective:-

- Define communication, collaboration and Team working
- Identify common challenges during effective communication, collaboration, and Team-working
- Describe the proposed solution for Gaps identified during communication, collaboration, and team-working

Session outline:-

Session 1.1. Purpose and definition on communication ,collaboration and team-working

Session 1.2. Current challenges affecting health professional communication, collaboration and team-working

Session 1.3. Solution for current health professional communication challenge

Session 1.1.Purpose and definition on communication, collaboration and team-working

Session duration: 45'

Session objective: - At the end of this session participant will be able to:-

- Define communication, collaboration, and Team working
- Describe the purpose of effective communication collaboration and team-working of health professionals in the health setting

Activity 1.1: Question and Answers
1. Define Communication, collaboration, team-working and multidisciplinary team 2. Explain the purpose of effective communication, collaboration, and team-working in health setting 3. Discuss challenges during communication, collaboration and team working in health setting
Time:- 25'
Instruction
Give 18' for critical overview and thinking of questions answer
Give 7' for presentation/telling the proposed answer for the whole group of participants

1.1.1. Purpose and definition on communication, collaboration and team-working

Communication: - is the process of exchanging information and meaning between or among individuals through a common system of symbols, signs, and behavior.

A team: - is a collection of two or more people who interact with each other and perceive themselves to share some common interests or to accomplish a certain activity.

Teamwork: - is a special ability to work together towards a common vision and/or individuals working together to accomplish more than what they could do alone.

Collaboration:- When it comes to defining collaboration, "for a concept so widely used in everyday language, there is a surprising lack of a clear understanding of what it is to collaborate, and of how best to support and improve collaborative working. Some definitions in the literature indicate that collaboration

- Involves multiple people interacting to achieve a common goal
- Active and ongoing partnership between professionals and institutions with diverse backgrounds and mandates who work together to provide services

- Process that involves cooperation, communication, negotiation, trust, respect, and understanding to build a synergistic alliance that maximizes the contributions of each participant
- Involves constructing both a collective action to address complex patient needs and an inter-professional team relationship involving respect and trust
- Process of working together, negotiating agreement and managing conflict, and both valuing and understanding one another
- Involves working together, shared planning over time, functioning cooperatively as colleagues and equals with respect and a view to finding solutions together

Thus the definitions of collaboration suggest that it is an integration of activities and knowledge that requires a partnership of shared authority and responsibility with four critical elements described by Sullivan

- Coordination (working to achieve shared goals)
- Cooperation (contributing to the team, understanding and valuing the contributions of other team members)
- Shared decision-making (relying on negotiation, communication, openness, trust, and a respectful power balance)
- Partnerships (open, respectful relationships cultivated over time in which all members work equitably together)

Health care, by definition, is a multidisciplinary profession in which doctors, nurses, and health professionals from different specialties must work together, communicate often, and share resources [3]. Health teams are often made up of a variety of professionals – called cadres in health care – each with specialized knowledge and responsible for different tasks. These multidisciplinary teams are made up to solve health problems [4]. Successful health teams strive to understand the patient's situation, ask probing questions about the problem, make an initial assessment, and, after discussion, provide a recommendation6. Teams can also work together to develop health promotion for diverse communities and instill disease prevention behaviors among patients [2].

Communication, collaboration, and teamwork is a core and essential health professional competencies in the current health care practice that help improve patient care outcomes through fostering effective and efficient advocacy and counseling strategy. Here it is important to put one quote to elaborate more about teamwork

"Talent wins games, but teamwork wins championship", Michael Jordan's quote, thus there is no I in teamwork.

1.1.2. The importance/purpose of effective communication, teamwork, and collaboration in health care

- Improved Patient-Provider Interactions
- Improved Patient Satisfaction,
- Decrease Patient Complaints & Readmissions
- Generation of New Ideas
- Improved Efficiency with Better Quality care
- Higher Morale moral of staffs
- Create More Learning Opportunities
- Improve Sense Of Accomplishment
- Faster Innovation
- Help to Stronger Working Relationships
- Foster Healthy Competition and results seen in terms of patient adherence to health professional counseling, improved customer satisfaction with delivered health care service, improved health care service outcomes, and reduced morbidity, and mortality.

Evidence shows, in the current healthcare practice, institutions that foster effective communication, good team working skills, and collaboration with their customers in their day-to-day routine healthcare service achieve good patient trust and everlasting results for their community.

Effective communication in health care service delivery also has a treatment component for hypertensive, patients with heart disease and endocrine disorders through reducing stress.

Key point/ Summary

- Good Communication, collaboration ant team-working is very key to decrease medical error and improve patient outcome in a health setting
- The main purpose/importance of effective communication ,collaboration and team-working in health setting is to get:
    - ✓ Improved Patient-Provider Interactions
    - ✓ Improved Patient Satisfaction,
    - ✓ Decrease Patient Complaints & Readmissions

- ✓ Generation of New Ideas
- ✓ Improved Efficiency with Better Quality care
- ✓ Higher Morale moral of staffs
- ✓ Create More Learning Opportunities
- ✓ Improve Sense Of Accomplishment
- ✓ Faster Innovation
- ✓ Help to Stronger Working Relationships

Session 1.2: Challenges/barriers and solution for effective communication, collaboration, and Team-working in health setting

Session duration: 45'

Session objective

At the end of this session participant will be able to:

- Identify common challenge/barrier of effective communication, collaboration and team working in a health setting
- Discuss solution for effective communication, collaboration and team-working in health setting

Activity 1.2: think- pair-shear

- Identify communication common communication collaboration and team-working challenges in health institution then
- Explain the solution of for identified communication, collaboration and team-working challenge

Instruction

Time 10'

- ❖ Ask participants to remember one communication collaboration and team work challenge and think on it for 3'
- ❖ Ask them to be in group of 2 participants and shear each other their experience they identified as a challenge and how they solve it for 5
- ❖ Ask the participant to shear for the large group for 3'

Factors that widen the health gap are multi-factorial. Miscommunication may exist between healthcare workers, patients and technological systems, and more. Some of the factors that lead to ineffective communication in healthcare.

1.2.1: Use of updated communication channels

The global healthcare industry boasts of some of the most advanced technology in the world. From AI to VR-assisted operations, and from 3D printing to robotic surgeries, healthcare has seen some incredible scientific breakthroughs. Yet, it's shocking that many medical organizations haven't adopted the latest communication technologies. Not just that, the whole burden lies with the senior practitioners to plan and send communication materials to patients, mid-level employees, frontline workers, and other caregivers. There is no infrastructure to support streamlined multi-directional communication.

1.2.2: Lack of focus on internal communication

Most organizations focus on improving communication between healthcare professionals and patients, but the gap between the healthcare professionals themselves is usually a blind spot.

Many doctors work alone. Specialist care is often fragmented. And healthcare professionals are not always in contact with each other. This leads to a lower quality of care. This is where a well-thought-out internal communications strategy is vital.

When decisions are being made that could drastically change the experience of those working on the frontline, it seems strange that those on the frontline are rarely consulted. The result is the formation of unrealistic rules and regulations that can't be implemented in the real world.

1.2.3: Limited technological aptitude

Gaps in technological ability affect both healthcare workers and patients. A report published by the Good Things Foundation in 2019 found that 55% of over 65s lack at least one essential digital skill.

In fact, over 50% don't have the basic digital skills they need. This prevents organizations from truly adopting the tools that can streamline internal communication.

1.2.4: High-pressure environment

Healthcare workers tend to be pressed for time. These are professionals with limited resources tasked with an array of responsibilities such as meeting patients, diagnosing conditions, monitoring reports, supervising

treatment, and much more. And the ongoing pandemic has added even more to their stress and work pressure.

Activity 1.3: Group Discussion

Questions

A Hospital manager conduct an internal organizational audit/staff survey using developed communication gaps institutional tool and finally conclude that there is a Limited technological aptitude.

1. Discuss health impact of limited technological aptitude?
2. Analyze possible solution for this type of health professional communication gaps?
3. What are the solution for improving health professionals challenge/barrier during communication, collaboration and team-working in health setting

   Time 20'

   Instruction

   Be in a group of 5. Discuss on it for 15' and present for the large group 5' using flipchart

Session 1.3: Solution for improving current health professional communication, collaboration, and team-working gap

Session Duration: 45'

Session Objective

Developing Comprehensive and efficient internal communication practices aren't easy to adopt, even for experienced healthcare professionals. It needs time and has its own stratagem. Here are the steps to foster better internal communication in your healthcare organization.

1.3.1: Assess your current situation

For establishing good internal communication mechanisms the team member or leader should understand where they are right now. Thus start by Conducting an internal audit or employee survey to get answers to questions such as:

- How do workers communicate most often?
- Are there any commonalities or trends in communication mishaps?
- How are company news and policies communicated?

This is also your opportunity to solicit feedback and suggestions to address communication problems and enhance internal communication.

Implementing new methods and patterns of communication will require time and effort, but it will pay off in the end.

1.3.2: Form an internal communication strategy

Good internal communication involves everyone in the organization, but it starts at the top. It needs support and active participation from senior leadership.

When administrators and managers clearly define and communicate goals, processes, and expectations, along with aligning their own behavior and goal, it's easier for employees to adhere to the same standards.

Clearly shape and share guidelines for effective internal communication, you must have a concrete plan. A great internal communication strategy will answer questions such as:

- What do you need to communicate in the next 6-12 months?
- Which communication tasks are manual and which can be automated or streamlined with technology?
- What software/tools should you adopt for your healthcare facility?
- How will you distinguish between the handling of must-read and nice-to-know updates?
- How will you ensure and track whether important information is reaching the intended audience?
- How can you meet the communication needs of frontline workers, technologically challenged individuals, and other staff groups?
- How will you train and onboard staff members to align with new communication rules and technologies?

1.3.3: Use technology to streamline communication

Using the right tools and technologies goes a long way in improving healthcare communication. A study found that 92% of healthcare workers think internal communication technology is "extremely important" or "very important" for the betterment of clinical results.

- Set up reminders and schedule employee performance reviews and other team meetings.
- Share new procedures and policies with everyone in the organization (including frontline staff) with just a few clicks or taps.
- Make certain messages mandatory and monitor electronic signatures to check whether employees have read the information.

- Store and distribute training materials in multiple formats to make sure workers understand and can refer to the information again as needed.
- Most of all, a great communication tool can empower everyone to access and share stories, updates, and suggestions across your organization. This change alone can lead to a significant boost in employee lifecycle and productivity. So unless you make it really easy for them to adopt and use a new communication mechanism or policy, it's not going to put a dent.

summary:

Factors that widen the health communication gap are multi-factorial, the main category of the communication gap include:-Lack of focus on internal communication, Use of Outdated communication channels, Limited technological aptitude, and a high-pressure environment.

The solution stratagem for existing communication gap should start from Assessing and determining the level then capacity development for planning and use of internal communication strategy

Chapter Two: - Communication

Duration:- 180'

Description: - the focus of this chapter is to give a basic concept of effective communication, Effective communication principles, and Communication process/elements of communication, Importance of effective communication (patient safety, family medicine), Communication in conflict resolution, Challenges of Effective communication and Solutions for communication challenge.

General objective

At the end of this chapter, the participant will be able to:-

Identify and analyze the principle, process, importance, challenges, and proposed solution for effective communication in a healthcare setting

Specific objective

- Define effective communication
- Analyze principles of effective communication
- Identify processes or elements of effective communication

- Discuss the importance of effective communication
- Identify challenges of effective communication
- Describe a proposed solution for challenges of effective communication
- Develop tool for effective communication
- Demonstrate effective communication in a simulated setting using role play

Session outline:-

1.1. Purpose and Definition of communication

1.2. Effective communication principles

1.3. Communication process/elements and Importance of effective communication (patient safety, family medicine)

1.4. Challenges and Solutions for communication challenge

Session 2.1: Principles of communication

Session duration: 45min

Session objective

At the end of this session participant will be able to

- Define effective communication
- Analyze principles of effective communication

Activity 2.1: Individual reflection

Time 5min

1. Shear your experience how to daily communicate among health professional and patients in your day to day health care practice?

2.1.1: Purpose and Definition of communication

Communication: - is a word derived from the Latin word communis or commūnicāre, which means 'to make common' or 'to share'. It is the act of conveying the intended meaning/ideas to another person through the use of mutually understood signs and language.

Communication refers to the exchange of information between healthcare professionals and patients, as well as among healthcare professionals themselves. It is a critical component of providing quality care and improving patient outcomes. In order to be effective, healthcare communication must be clear, accurate, and easily understood by all parties involved.

Communication is the process of meaningful interaction among human beings. The basic steps of communication are: the forming of communicative intent, message composition, message encoding, and transmission of signal, reception of signal, message decoding and finally interpretation of the message by the recipient.

Communication is simply the act of transferring information from one place to another. When you call or talk verbally to your friend, then you are said to be communicating with your friend

In summary, effective communication in healthcare is a complex process that requires a range of skills and a consideration of the context in which communication is taking place. By paying attention to these factors, healthcare professionals can ensure that patients receive accurate information, make informed decisions about their care, and receive the quality care they deserve

What is effective communication?

Communication which produces results. It is communication where the intended message is delivered clearly, and the desired feedback is achieved. It is communication that does not give room for misunderstanding. It is the best form of communication.

Communication can be effective or it can be misunderstood leading to ineffectiveness. Meaning communication must be effective. Ineffective communication is expensive to the participants because it blocks results. In other words communication is a matter of effectiveness. Effectiveness

Effective Communication skills must include:

- communicating using
- Eye contact & visible mouth
- Body language

- Silence
- Checking for understanding
- Smiling face
- Summarizing what has been said
- Encouragement to continue
- Asking some questions

Communication is the process of exchanging information, ideas, and emotions between individuals or groups. It is a fundamental aspect of human interaction and plays a crucial role in building and maintaining relationships, achieving common goals, and resolving conflicts. Communication can take place through various means, including speech, writing, gestures, and visual aids.

Effective communication requires clear and accurate transmission of information, active listening, understanding, and empathy. It also involves the use of appropriate language, nonverbal cues, and technology. The success of communication depends on the sender and receiver's ability to understand each other and on their shared context and culture. Poor communication can lead to misunderstandings, conflict, and negative outcomes, making it essential for individuals and organizations to develop effective communication skills. This can include training in active listening, language skills, and nonverbal communication.

The 7 Cs of Communication

The 7 Cs provide a checklist for making sure that your meetings, emails, conference calls, reports, and presentations are well-constructed and clear so your audience gets your message. According to the 7Cs, communication needs to be:

- Clear.
- Concise.
- Concrete.
- Correct.
- Coherent.
- Complete.
- Courteous.

2.1.2: Characteristics of communication include:

- **Communication is a process**: Communication is a 2-way process that involves; listening to others (Receiving) messages and Asserting/Expressing (Sending).

- **Communication a dynamic**: it ever-changing depending on the variables at play.
- Communication is a complex a process.
- Communication is a two-way process of reaching mutual understanding, in which participants not only exchange (encode-decode) information but also create and share meaning.
- Communication involves the sharing of information using a code.
- Communication occurs between people and sometimes animals
- Communication is irreversible: once one has communicated something it cannot be recalled back.
- Communication is a system
- Communication must have the elements of communication: Source, receiver, channel, message, noise, and feedback.
- Communication can be verbal/ non-verbal or visual.
- Communication can be accidental especially in non-verbal

2.1.3: Approaches to (types of) Communication

We communicate to inform, educate, persuade, instruct, motivate or entertain. To do this we use two main approaches or types of communication

2.1.3: One-way communication

In this approach, the sender talks while the receiver passively listens. The sender hopes that the receiver will understand the message (subject matter) and silently share the knowledge, ideas, feelings, etc. The most important point to note in this approach is that the interests of the receiver are ignored. The approach is also called an open-ended type of communication. It is a linear type of communication, and dissemination of information is usually to promote a person, place, product, service or program, etc. Commonly used in advertising, the message is designed to persuade the receiver to take action as prescribed by the sender. There is no input from the receiver. The motivation of the sender may be for personal gain, or to provide information which the sender considers is for public good. The model is best used when the message is simple and needs to be communicated quickly (e.g. the date /time of next meeting) and not much feedback is expected. It may be quicker, but with no opportunity for feedback or dialogue to clear up misunderstanding, it can be less effective.

Sender [encodes] → Message [channel] → Receiver [decodes]

Figure 1: Communication Channel/Process

2.1.4: Two-way communication

In this approach, the sender seeks the response of the receiver (Feedback) and hence there is mutual exchange of ideas and feelings. This interaction ensures the contribution of both sender and receiver to the subject. This interactive type of communication is encouraged in most adult communications including training and education as it can be monitored and adapted to better suit the receiver's needs.

In any communication, meaning lies in the mind of the receiver, who actually controls what and how much is communicated. As the message is more complex, two-way communication becomes essential. The addition of the feedback in this communication type allows the sender to find out how the message is being received. The sender, however, still controls the process and can affect the quality and quantity of the feedback provided through the type of questions chosen and the way they are asked.

This communication type is depicted as follows.

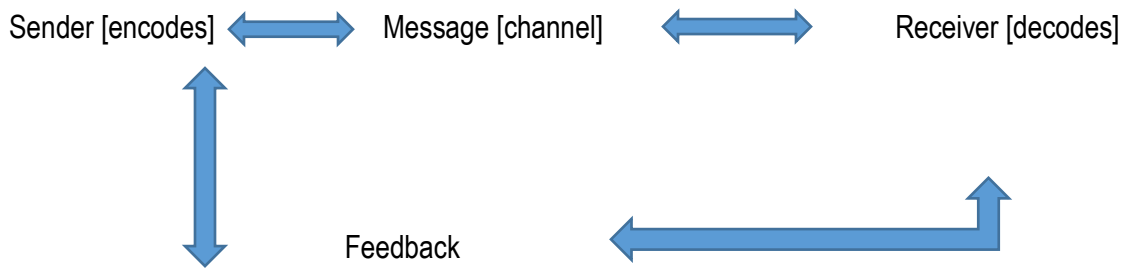

Figure 1: Two way communication scheme, April 2023

Session 2.2: Forms of Communication

Session duration: 30'

Session objective: At the end of the session the participants will identify different forms of communication

2.2.1: Verbal Communication

All forms of communication can be categorized as either verbal or nonverbal. Both verbal and nonverbal communication can be subdivided into either vocal or non-vocal. Verbal communication involves using speech to exchange information with others. We usually communicate verbally in face-to-face conversations such as; meetings, interviews, conferences, speeches, phone calls e.t.c. Much of the

communication that takes place between people is both verbal and non-verbal; that is, it is based on language and gestures.

Verbal communication of the vocal category includes spoken language, while non-vocal verbal communication involves written communication as well as communication.

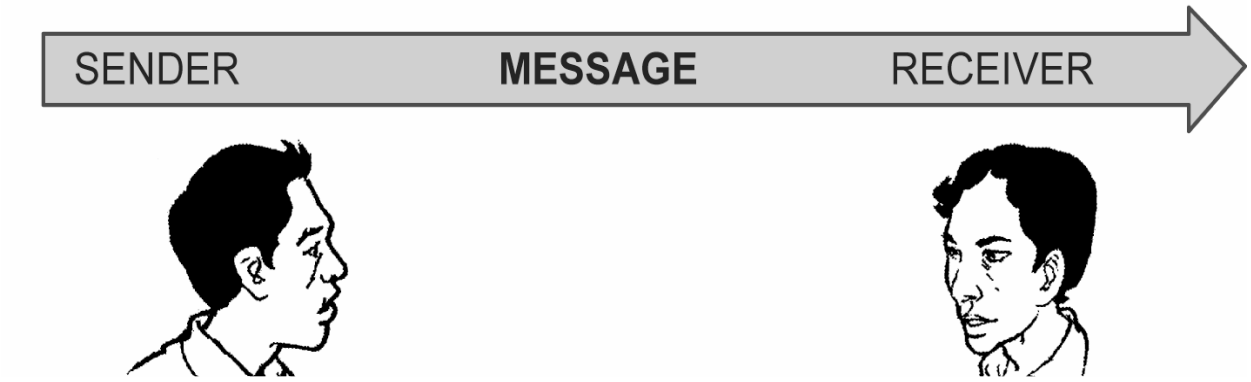

Figure 2: Verbal communication approach

It is transmitted through transmitted through sign language, finger spelling, Braille, or other similar alternatives to verbal language.

Para verbal /paralinguistic/ paralanguage features

Paralinguistic or paralanguage features are the aspects of spoken communication that do not involve words. They add emphasis or shades of meaning to what people say. Paralinguistic features accompany verbal communication and are the vocal signals beyond the basic verbal message. Paralinguistic elements in a person's speech, convey meaning beyond the words and grammar used. Examples of paralinguistic features include pitch, rate, quality of voice and amplitude. Other forms of paralanguage can also include laughter or imitative speech. Prosody, which is the rhythm, pattern, stress, rate, volume, inflection and intonation of a person's speech, is also a form of paralanguage.

People express meaning not just in what they say but in the way they say it. The paralinguistic features employed by a speaker provide hint to the meaning, communicate the speakers' attitudes and convey their emotion. Paralinguistic features also alert the listener as to how to interpret the message. Many of these paralinguistic features are culturally coded and inherent in verbal communication, often at a subconscious level.

2.2.2: Non-Verbal

Non-verbal communication is a type of communication that employs gestures and body language. The term "body language" is sometimes used to denote non-verbal communications. "Body Language" is the communication of personal feelings, emotions, attitudes, and thoughts through body-movements such as gestures, postures, facial expressions, touch, smell, walking styles and positions among others. These movements can be done either consciously or involuntarily; more often they 'happen' subconsciously, and are accompanied, or not accompanied, by words.

There are basically three elements in any face-to-face communication. These three elements account differently for the meaning of the message:

• Words account for 7%

• Tone of voice accounts for 38% and

• Body language accounts for 55% of the message.

Our body language and tone of voice should be consistent with the words we use. This is only possible when we say what we mean to say and say it rightly. Otherwise we can confuse people and reduce the prospect of getting our message across to be understood. Non-verbal communication can lead to misunderstandings, communication failure and even conflicts if the interlocutors are careless.

Non-verbal communication includes: (with mnemonic; PEOPLE)

- (P) POSTURES & GESTURES
- (E) EYE CONTACT
- (O) ORIENTATION
- (P) PRESENTATION
- (L) LOOKS
- (E) EMPRESSIONS OF EMOTION

Body language and kinesics are based on the behavioral patterns of non-verbal communication. Body language can actually contradict verbal communications and reveal our inner feelings about any particular person or topic either intentionally or unintentionally. The way in which you fold your arms, cross your legs, sit, stand, walk, move your head, eyes, lips reveal what you may be thinking or feeling. For example, you may be sitting and conversing with a person; suddenly, he leans forward and with both arms clutches the chair. By doing so he non-verbally communicates to you his desire to end the meeting. Body language has shed new light on the dynamics of relationships.

Hands Gestures

Hands and arms are used by most of us to communicate our thoughts. People rub arms together, keep their arms closed, and clinch the fists. All these tell what the person has in his mind involuntary. It is a way that people non-verbally communicate positive expectations. Hands clenched together seems to be a confident gesture as some people who use it are often smiling and sound happy. However, if the hands are clenched too tightly, it is indicative of frustration or hostile attitude.

Eye Gestures/facial expression

Facial expression, offers the most readily observable group of gestures. We focus our eyes on the face more often than on any other part of the body, and the expressions we see there have widely accepted meanings.

If a prospect's eyes are downcast and face turned away, you're being shut out, however, if the mouth move, he is probably considering your presentation. If his eyes engage yours for several seconds at a time with a slight, one-sided smile extending at least to nose level, he is weighing your proposal. It is only when you see 'eye to eye' with another person that a real basis for communication can be established. Other forms of nonverbal communication include: Touch, smell, distance.

2.2.3: Characteristics of Effective Communication

The principles of effective communication for healthcare professionals include:

1. **Clarity**: Communication should be clear, concise, and easily understood by patients and other healthcare professionals.
2. **Respect:** Communication should demonstrate respect for the patient's dignity, privacy, and autonomy.
3. **Empathy**: Communication should be empathetic, demonstrating an understanding of the patient's feelings and concerns.
4. **Active listening**: Healthcare professionals should practice active listening, paying close attention to the patient and asking questions to ensure understanding.
5. **Cultural sensitivity**: Communication should be culturally sensitive and appropriate, taking into account the patient's cultural background and adapting communication styles accordingly.
6. **Informed consent:** Communication should include a clear explanation of medical procedures, treatments, and risks, and obtain informed consent from the patient.
7. **Confidentiality**: Communication should respect the patient's privacy and maintain confidentiality in accordance with medical ethics and legal requirements.

8. **Team communication**: Effective communication within a healthcare team is essential for coordinated patient care and improved outcomes.

By following these principles, healthcare professionals can improve their communication skills and build strong relationships with patients, enhancing the quality of care and promoting positive outcomes

Activity 2.2 gallery walk

Questions.

1. Define one-way and two-way communication and give examples for each type of communication.
2. Discuss the characteristics, strengths, and limitations of one-way and two-way communication
3. Discuss forms of communication.
4. Identify effective communication principles.
5. Describe the character of effective communication.

Time 30min for preparation and 5min for presentation

Instruction

Be in a group of 5 and prepare the assignment with your group

Write in a flipchart

Post in space you have prepared

Present it to the participant

2.2.4: Session Summary

Communication establishes relationships and makes organizing possible. Every message has a purpose or objective. The sender intends -- whether consciously or unconsciously -- to accomplish something by communicating. Communication is the process by which a message or information is exchanged from a sender to a receiver. Effective communication is all about conveying your messages to other people clearly and unambiguously. It's also about receiving information that others are sending to you, with as little distortion as possible.. Communication has been considered to be the bottleneck of Management, where any management function is just not possible to take place without making use of Communication.

Effective communication in healthcare is critical for providing high-quality patient care, promoting positive outcomes, and resolving conflicts.

Healthcare professionals need to be able to communicate effectively with patients, their families, and other members of the healthcare team to ensure that everyone is on the same page and working towards the same goals.

The principles of effective communication for healthcare professionals include being clear, concise, empathetic, and respectful.

Session 2.3: Communication process or elements of communication

Session duration: 45'

Session objective

At the end of this session, the participant will be able to

- Identify processes or elements of effective communication
- Discuss the importance of effective communication

Activity 2.3 think pair shear

Question

1. What do you think about the importance of effective communication? Or
2. Tell the benefit of effective communication in health profession?

Time 10min

Instruction

Ask participants to critically think on importance/benefit of communication in health care

Ask participants to make pair of 3 participant and discuss/shear their idea

Ask participants to shear their work to whole group

2.3.1: Communication process or elements of communication

The elements or process of communication in healthcare professionals include:

- Sender: The individual or group originating the message. In healthcare, this could be a doctor, nurse, or other healthcare professional.
- Message: The information, idea, or emotion being conveyed. In healthcare, this could be medical information, a diagnosis, or treatment plan.
- Encoding: The process of converting the message into a form that can be transmitted, such as spoken words, written text, or nonverbal cues.
- Channel: The means by which the message is transmitted, such as face-to-face conversation, email, or telemedicine.

- Receiver: The individual or group receiving the message. In healthcare, this could be a patient, family member, or other healthcare professional.
- Decoding: The process of interpreting the message, translating it into a form that can be understood.
- Feedback: The response or reaction to the message, indicating whether it was understood and accepted.

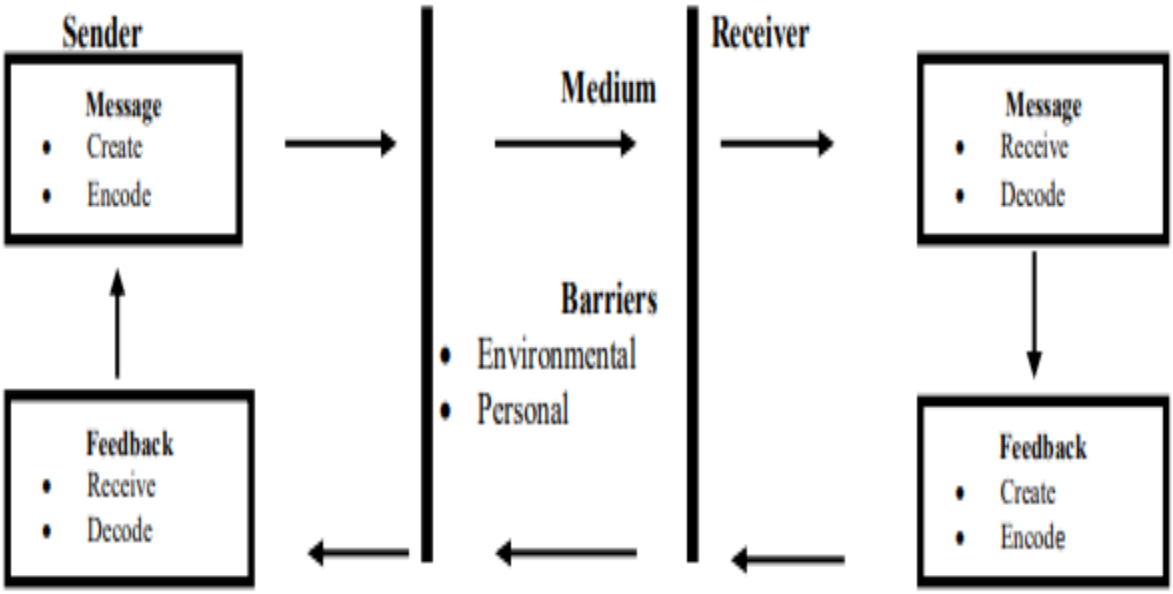

Figure 3: shows process of effective communication

2.3.2: Importance of Effective Communication (Patient, Family, Medicine)

Effective communication is a critical component of the healthcare industry, with far-reaching effects on patient safety, family involvement, and medical outcomes. Here are some additional details on the importance of effective communication in healthcare:

1. **Improved patient safety:** In healthcare, clear and accurate communication is essential for ensuring patient safety. Effective communication can help prevent medical errors by ensuring that all members of the healthcare team have a clear understanding of the patient's medical history, diagnosis, and treatment plan. It can also help prevent misdiagnosis by ensuring that all relevant information is communicated accurately and effectively.

2. **Enhanced family involvement**: Communication is also critical for involving families in the care of their loved ones. By communicating effectively with families, healthcare professionals can provide them with the information and support they need to make informed decisions and help care for their loved ones. This can lead to improved patient satisfaction and better medical outcomes, as families are more likely to be involved in the care of their loved ones and feel more confident in the medical decisions being made.

3. **Better medical outcomes**: Effective communication is also essential for making informed decisions and developing appropriate treatment plans. When healthcare professionals communicate effectively with each other, they are better able to gather all relevant information, consider different perspectives, and make informed decisions. This can lead to better medical outcomes and improved patient experiences.

4. **Increased patient satisfaction**: Effective communication can also help build trust and rapport between healthcare professionals and patients. By communicating clearly, empathetically, and respectfully, healthcare professionals can help patients feel more comfortable and confident in the care they are receiving.

5. **Improved teamwork and collaboration**: Effective communication is also essential for promoting a culture of teamwork and collaboration among healthcare professionals. When healthcare professionals communicate effectively, they are better able to coordinate care, share information, and work together to achieve the best possible outcomes for patients.

In conclusion, effective communication is a critical component of the healthcare industry and has far-reaching effects on patient safety, family involvement, and medical outcomes. By prioritizing communication skills, healthcare professionals can provide better care, improve patient outcomes, and enhance the overall healthcare experience.

2.3.3: Communication in Conflict Resolution

Effective communication is essential for conflict resolution in the healthcare industry. In healthcare, conflicts can arise between healthcare professionals, between healthcare professionals and patients, and between patients and their families. Some common sources of conflict in healthcare include differences in opinions or goals, miscommunication, and cultural or language barriers. To resolve conflicts effectively, healthcare professionals should employ the following principles of effective communication:

1. **Active listening:** By paying close attention to what the other person is saying and trying to understand their perspective, healthcare professionals can help resolve conflicts and reach mutually agreeable solutions.

"We were given two ears but only one mouth, because listening is twice as hard as talking.

2. **Empathy**: Empathy involves putting oneself in the other person's shoes and understanding their feelings and concerns. By showing empathy, healthcare professionals can help build trust and rapport and resolve conflicts more effectively.
3. Open-mindedness: Open-mindedness involves being willing to consider other perspectives and being open to finding solutions that are acceptable to all parties involved. By being open-minded, healthcare professionals can help resolve conflicts and reach mutually agreeable solutions.
4. **Respect:** Respect involves treating others with dignity and understanding, regardless of their background or opinions. By showing respect, healthcare professionals can help build trust and rapport and resolve conflicts more effectively.
5. **Clear and concise communication**: Clear and concise communication is essential for resolving conflicts in healthcare. By communicating effectively and avoiding misunderstandings, healthcare professionals can help resolve conflicts and reach mutually agreeable solutions.

In conclusion, effective communication is essential for conflict resolution in the healthcare industry. By employing the principles of active listening, empathy, open-mindedness, respect, and clear and concise communication, healthcare professionals can help resolve conflicts and improve the overall healthcare experience.

Activity 2.4 : Gallery walk

Questions

1. Analyze the importance of effective communication in
   A. Patient treatment?
   B. Family medicine?
   C. Conflict resolution?
2. Discuss the principles of effective communication in conflict resolution?

   Instruction

   Be in a group of 5 and discuss the following questions, prepare in flipchart

Post to space prepared and present to participants Time 20min for preparation and 5min for reflection and 5 min for feedback

Session summary:

Effective communication during conflict resolution has essential basic principles this include the following active listening, Empathy, respect and clear massage.

Effective communication has many important benefit in among them the main one include increase patient safety, serve as family support in health, and medicine/treatment for patient with disease. It helps to ensure that patients and their families understand important information about their health, treatment options, and potential outcomes. Good communication can reduce stress and anxiety for patients and their families and promote positive outcomes by encouraging them to be active participants in their care.

Session 2.3: Challenge and proposed solutions of effective communication in health setting

- **Session duration**
- **Session objective**
- At the end of this session participant will be able to
- Identify challenges of effective communication

Activity 2.5:question and answer Questions 1. Explain the challenges you face while trying to communicate patient family whose 14 year old child is in serious illness and planned to undergo surgery. Time 15'

2.3.4: Challenges/ barriers / of Effective Communication

Communication never occurs in a vacuum, but always takes place in a particular context of an environment that helps it to give meaning. The nature of that context however, may hinder the communication process and even cause it to break down resulting in; misunderstanding lack of response or motivation and distortion of the message. A breakdown can occur at any point in the communication process. It can be anything in the sender, transmission or receiver. This can lead to conflicting views and lack of comprehension of the intended

idea or information. Here are some common challenges that healthcare professionals face when trying to communicate effectively:

1. **Language barriers**: In a culturally diverse healthcare environment, language barriers can make it difficult for healthcare professionals to communicate effectively with patients and their families.
2. **Time constraints**: Healthcare professionals often work under tight schedules and may not have enough time to fully engage in effective communication with patients and their families.
3. **Emotional stress**: Patients and their families may be experiencing emotional stress and anxiety, making it difficult for healthcare professionals to communicate effectively with them.
4. **Information overload:** Healthcare professionals are often inundated with complex information, making it difficult for them to effectively communicate this information to patients and their families.
5. **Different communication styles**: Healthcare professionals come from diverse backgrounds and may have different communication styles, making it challenging for them to effectively communicate with one another and with patients and their families.
6. **Technical jargon**: The use of medical terminology and technical jargon can make it difficult for patients and their families to understand the information being communicated by healthcare professionals.
7. **Power dynamics**: Healthcare professionals may hold a position of authority over patients and their families, leading to power imbalances that can make it difficult for effective communication to take place.

In conclusion, effective communication is essential for providing high-quality patient care, but it is not without its challenges. By being aware of these challenges and working to overcome them, healthcare professionals can improve their communication skills and provide better patient care.

Activity 2.6: group discussion

Questions

1. Discuss common barriers to effective communication in health institution, priorities the barrier based on their significance and justify your answer
2. Make presentations using flip charts with gallery walk

Be in a group of 10 and discuss the following questions

Time 15min for discussion and 5 minute for presentation of each group

2.3.2: **Solution for Challenges of Effective Communication**

Here are some potential solutions to overcome the challenges of effective communication in healthcare:

1. **Language interpretation services**: Providing language interpretation services can help to overcome language barriers and ensure that patients and their families understand important information.
2. **Allocating enough time for communication:** Making time for effective communication with patients and their families can help to ensure that important information is communicated clearly.
3. **Emotional support**: Providing emotional support to patients and their families can help to reduce their stress and anxiety, making it easier for healthcare professionals to communicate effectively with them.
4. **Simplifying information:** Simplifying complex medical information can help to ensure that patients and their families understand important information.
5. **Communication training**: Providing communication training to healthcare professionals can help to improve their communication skills and ensure that they are able to effectively communicate with patients and their families.
6. **Using clear language**: Avoiding the use of technical jargon and using clear language can help to ensure that patients and their families understand important information.
7. **Maintaining professional boundaries**: Maintaining professional boundaries and treating patients and their families with respect and empathy can help to overcome power imbalances and promote effective communication.

In conclusion, by addressing these challenges and implementing solutions, healthcare professionals can improve their communication skills and provide better patient care

Activity 2.8. multiple role play on

1. Breaking bad news(patient dying on operation table)
2. Councelling of HIV positive client
3. Getting informed consent for 6 year old child
4. Councelling for family planning

Instruction

create case scenario

setting situation

develop discussion questions

Time 40min for preparation and 15min for each presentation and feedback

Session summary

- There are different type of effective communication challenges/barriers that healthcare professionals face in their attempts to communicate effectively. These challenges include language barriers, time constraints, emotional stress, information overload, different communication styles, technical jargon, and power dynamics.
- There are different type of effective communication challenge/barrier that health professional face during communication. To overcome these challenges, healthcare professionals can use language interpretation services, allocate enough time for communication, provide emotional support, simplify information, attend communication training, use clear language, and maintain professional boundaries

Chapter three: - Collaboration

Duration: 120minute

Description: - This chapter is designed to enable learners to involve multiple people interacting to achieve a common goal and to enable' 'an active and ongoing partnership between professionals and institutions with diverse backgrounds and mandates to work together to provide services''

General objective

At the end of this chapter, the participant will be able to:

Analyze the principle, stage/element, importance, challenge, and possible solutions for successful collaboration.

Specific objective

- Define collaboration
- Describe principles of collaboration
- Discuss the stage/element of collaboration
- Analyze the importance of successful collaboration
- Appraise challenges of successful collaboration
- Identify a proposed solution for successful collaboration
- Identify types of collaboration
- Describe principles of collaboration

Session outline:-

Session 3.1: Introduction to effective collaboration

Session3.2: Types of collaboration and Stage/elements of collaboration

Session3.3: Principles and Importance of successful collaboration

Session3.4: Challenge /barrier and proposed solution for effective collaboration

Session 3:1 Introduction to effective collaboration

Session duration: 30'

Session objective

At the end of this session, the participant will be able to

- Define collaboration
- Describe principles of collaboration

Activity 3.1 think-pair-share Question 1. Did you have experience how collaborating with professionals in the workplace? 2. What is the purpose and benefit of collaboration in workplace? Instruction Think about the question, then pair with two participants to discuss ideas then share for large group Time 5' for thinking, 5'for discussion of ideas with your pair and 2' for shearing in large group

Collaboration: is a working practice where by individuals work together for a common purpose to achieve, or the act of producing or making something together which enables individuals to work together to achieve a defined and common purpose or it is the act of working with another person or group of people to create or produce something.

"Collaborative practice happens when multiple health workers from different professional backgrounds work together with patients, families, careers and communities to deliver the highest quality of care across.

- Involves multiple people interacting to achieve a common goal.
- Consists of social inputs and task inputs
- an active and ongoing partnership between professionals and institutions with diverse backgrounds and mandates who work together to provide services
- Process that involves cooperation, communication, negotiation, trust, respect, and understanding to build a synergistic alliance that maximizes the contributions of each participant

- Involves constructing both a collective action to address complex patient needs and an inter professional team relationship involving respect and trust

3.1.1: Effective collaboration

Studies have found that working together makes people more motivated and helps them perform much better. People who are collaborating on tasks stay interested for longer, feel less tired and get better results than people who are working alone.

Collaboration in Health care involves the participation of patients, family, and a diverse team of often highly specialized health care professionals and Involvement of all these team members in a cooperative and coordinated way to provide exceptional care.

Important skills for teamwork and collaboration?

The important skills for collaboration and teamwork are adaptability, problem-solving, and communication. These skills are essential for team members to be able to communicate their thoughts and opinions clearly, recognize and resolve problems that develop within the team, and be adaptable and open to change in order to deal with changing circumstances.

3.1.2: Five tips for collaborating effectively

- Get everyone on the same page. Don't be afraid to over-communicate, especially with a remote team. ...
- To meet, or not to meet, that is the question. ...
- Take advantage of channels. ...
- Be a team player, but set some ground rules. ...
- Give your team members autonomy.

.Examples of effective collaboration

- Document Sharing. Cloud-based work is the future of collaboration.
- Task Management.
- Video Conferencing.
- Peer Training. ...
- Visual Brainstorming.
- Cross-functional Teams.

3.1.3. Guidelines for Effective Collaboration

We now realize the power of workplace collaboration and how critical it is for businesses to establish a strong team collaboration culture. We know that it leads to better ideas and outputs, not to mention that it makes the work process more meaningful and pleasurable overall.

What makes workplace collaboration successful is the availability of clear objectives, skill diversification among employees, the establishment of common communication protocols, trust between collaborators, and the use of appropriate tools.

To achieve the most successful workplace collaboration.

- Clear Objectives: What organizations are attempting to do must have a clear and well-defined shared objective. Without it, achieving anything as a team is extremely hazardous. Furthermore, a clear goal should be communicated to the team at all times. For successful team collaboration, a shared vision, established milestones, the lack of hidden motives, and a single objective at the end are all required.
- Skills Diversification: A well-balanced diversity of abilities is required to divide work fairly and allow team members to learn from one another and improve both emotionally and professionally.
- Establish Communication Protocols: It is critical for the team to have well-established communication standards in order to communicate and collaborate. This guideline will indicate when to utilize email, Slack, or other messaging services, as well as what information should be communicated in person.
- Be Coachable: As Michael Jordan used to say, my best skill was that I was coachable. I was a sponge and aggressive to learning. Such an attitude among all team members would facilitate team collaboration and assist team members to grow and deliver.
- Use the Right Tools: The appropriate digital collaboration tools may make it easier for team members to interact, exchange files and papers, and collaborate. The usage of standard tools by all team members is the way to proceed.
- Be Ready: When it comes to disruptive times like COVID19, having a digital mechanism might be critical. Companies that rely on digital remote collaboration were in a better position to allow workers to work from home with little to no downtime.
- Lead by Example: When it comes to effective corporations, the team leader should be a role model. Make time for your team to create and participate by always welcoming co-creation, promoting open communication, and providing time for them to develop and collaborate.

- Give Permission To Lead: The important thing to remember is that excellent leaders must also be good followers. The true trick is knowing when you should lead and when you should follow.
- Trust: When members trust one another, they work together. They truly listen to one another and presume the best in one another here. They grow transparent and even vulnerable with time.

3.1.4: Principles of effective collaboration

- **Relationship Management**. To be sustainable over time, a partner relationship needs to be based on systems and processes, whether internal or jointly developed, together with a continued focus on monitoring and developing competence and behaviors.
- **Alignment on Vision and Values**. Strong collaborations have a common vision, a common 'north star' which guides them toward creating greater value for their customers. Aligning on values also helps to keep a collaboration on track. These may not be identical but should be synergistic. Imagine how a scrappy start up partners with a Fortune giant. They might both value innovation and agility, but the large company may value process to much higher degree as they must to manage global operations. The values of these two partners are aligned but their differences are also what enables a great partnership.
- **Alignment of Business Objectives**. Here again, alignment does not mean identical. As you define the reason for partnering, the outcomes should contribute to the business objectives of each partner. For example, systems integrators often partner with product companies to provide implementation services. The product companies try to maximize unit sales, while the integrator maximizes services. This can create friction in the relationship, but they still need each other to drive revenue.
- **Collaborative leadership**. Collaboration is an unnatural act for many companies. It takes strong leadership who understands collaboration. It is a different management style. It is not command and control. It is leading through influence, consensus building, and seeking win/win outcomes. Important relationships should have an executive leader assigned to them to provide strategic guidance, promote collaborative behavior and ultimately be accountable for success.
- **Governance and processes.** Collaborations require governance processes that reflect how partners mutually agree to work together, allocate resources to the collaboration and to hold each other accountable to their commitments. This can be structured through governance committees and contract terms, but partnerships that can work together based on trust and alignment on vision and values will be more agile and responsive in fast moving business climate.

- **Collaborative competence and behavior**. Collaborations based on the most rigorous governance and processes may still struggle to deliver if the people in the partnership don't have the aptitude to collaborate. These are often call soft skills, but my experience has taught me these are the hard skills to master. These skills include a mindset that resolves conflict through win/win outcomes, transparency in communications, and harnessing your differences create innovative value.
- **Trust and Commitment to mutual benefit.** Trust is like air. When you have it, you don't notice it. When it isn't, you will experience great distress. Confidence that each organization is also looking out for the interests of partner organization(s) and of the collaborative venture builds and sustains trust in relationships. There is much to be gained from mutual agreement that each party's success is a function of everyone's success.
- **Value Creation**. Creating value is the underlying reason to partner. How are you creating value for your mutual customers? How are you creating value in your business and in your partners? This is partner math 1+1 is greater than 3. This is foundation of sustainable partnerships. Long standing relationships are continually creating value. They have built strong relationships that become the fuel in powering an engine for continuous value creation.
- **Information and Knowledge Sharing**. Creating value through collaboration requires sharing information and knowledge. This is enabled by trust and commitment to mutual benefit. Openness and transparency in interactions help build the relationship. But it is also important to be up front about what information cannot be shared, or what information can only be shared confidentially. One useful exercise during the formation stages of a collaboration is to come to an agreement of what can and cannot be shared. This is especially important in collaborations which have competitive overlap, which today, is most of them.
- **Risk Management**. Some collaborations are formed as risk mitigation measures other incur unique risks. For organizations not skilled at managing collaborative relationships. There can be higher risks in delivering value from the collaboration because the skillsets to manage cultural or operational differences aren't there. A different tolerance for risk can be itself a risk in the partnership. Partners should sit down and identify they risks in the relationship as well as in the venture and together decide how to manage the risks they identify.
- **Measurement and Optimization**. If you can't measure it, you can't manage it. We have all heard some version of that. Same with collaborations. You need to create a metrics model that measures the value you are creating. You should also include metrics related to the health and strength of the collaboration

because without a functioning collaboration, you won't have the relationship capital to create value. Establish a baseline early in the partnership, so you can track progress and manage for continuous improvement.

- **Exit strategy**. Some collaborations can be successful for many, many years, but even those should go through an evaluation from time to time to ensure they are still serving the purpose for which they were created and if not, can they by reinvented or is it time to wind them down? The exit strategy itself should be subject to continuous scrutiny and improvement as the business climate changes. Your exit triggers may change and the priorities in how you separate may change. How do you reallocate resources, intellectual property, and customer commitments? There's nothing like failed collaboration to demonstrate why working together is important. When collaboration works, it usually goes unnoticed, but when it fails, everybody knows it

Activity 3.2. gallery wok

Questions

1. Group 1: What is collaboration?
2. Group 2: Determine principles for successful collaboration
3. Group3: Develop guidelines for effective collaboration

   Instruction: form a group and prepare your work with a flip chart and present it to the large group

   Time 35min for preparation and 10' for presentation

Session 3.2: Type of Collaboration

Session duration: 45'

Session objective

At the end of this session participant will be able to:

- Identify different type of collaboration in health care

Activity 3.3: think –pair-share

Questions

1.What type of collaboration do you practice in work place

2. compare and contrast different type of collaboration in health institution

Instruction

Time 12’
Ask participants to Think about the questions for 5’
Ask participants to form a pair of 5 person and shear their idea for 5’
Ask participants to shear for the large group for 2’

Types of collaboration: there are different type of collaboration among these the man types are

3.2.1: Internal collaboration

Internal collaboration is when individuals or groups within an organization work together and share knowledge. This category of collaboration is broad and can exist in many formats and across various levels of the organization. Encouraging internal collaboration is beneficial because it promotes transparency, helping members across the organization share information and ideas to pursue goals and complete tasks.

Individuals can find many opportunities to collaborate internally, whether working within teams on projects or asking a colleague for help on a task. Organizations can also set up collaborative virtual or in-person spaces to promote these efforts

External collaboration

External collaboration represents sharing knowledge or working with individuals outside the organization. These external collaborators may include customers, vendors, other organizations and competitors. Organizations can use external collaboration for several purposes that support the business, such as gathering feedback or launching a new product or initiative. An organization often seeks external collaborators because they can offer something unavailable internally.

There are many forms of external collaboration. It can occur when an organization engages with its customers online, such as through social media, company websites or email. For example, after a customer purchases a product in-store, the company may email them to fill out a survey about their experience. The company uses these insights to assess the existing customer experience in its stores and identify areas for improvement. As another example, a fashion designer may collaborate with a wool manufacturer who can provide them with the materials needed to make their new clothing line.

Team collaboration

Team collaboration is one of the most common types of internal collaboration. Organizations often divide employees based into different departments based on their roles or responsibilities. For example, an organization may have sales, human resources, operations and finance departments. These departments may have sub-teams, such as the lead generation and customer success teams within a sales department. In a team, everyone has assigned roles and works toward the same goals, sharing knowledge or information relevant to those goals. Teams often also have a leader, such as a manager, who oversees the work completed by its members.

A team typically represents at least three or more individuals. Individuals within a team may work alongside one another to meet the team or organizational goals. For example, a sales department may set a goal to increase its revenues by 10%. Each member is responsible for making progress toward that goal, though they may perform as individuals. However, teams can also work together to meet a common goal within the department or organization, such as completing a project. Each team member can help one another complete their tasks or hold one another accountable for meeting established deadlines.

Cross-departmental collaboration

Cross-departmental collaboration is another type of internal collaboration in which individuals or groups from different areas of an organization work together. Typically, one of the partners provides resources or knowledge that the other department needs. They may need to create these partnerships for specific projects, or individuals can seek guidance on a task by asking someone with relevant expertise from another department.

For example, the product development team and marketing team within an organization may collaborate when launching a new product. The development team can present the product, describing what it does and the features that differentiate it from competitors' offerings. These insights can help the marketing team develop more accurate and effective campaigns that highlight the product's benefits to attract customers. Sharing their expertise can help these partners finish their tasks more efficiently, and they may learn something from one another that supports them on future projects.

Community collaboration

Community collaboration is when individuals with a shared interest work together. Often, the goal of community collaboration is to learn and share knowledge rather than completing a business task or project. However, when they gain information or insights from a member of their community, they may bring it back

to their team or workplace to support their work. Individuals in an organization may find this type of collaboration internally and externally.

For example, a department manager may have access to more high-level information about the organization than their team members. They can share these insights with the team to encourage transparency and help them understand how the organization is performing and how it affects them. Some teams can also use external community collaborations. For instance, a software developer may join an online community for professionals in their field. In this community, developers can ask questions about their problems and gather feedback or advice on how to resolve them, then bring their newly gained skills or knowledge to the workplace.

Virtual collaboration

Virtual collaboration enables individuals and teams to work together even when they're not in the same location. This type of collaboration is essential for remote teams where coworkers don't work in an office, though many in-person offices also benefit from virtual collaboration tools. For example, many offices use chat software or email to send messages internally. These tools enable individuals to communicate without leaving their desk if their colleague works in another area of the office.

Virtual teams also use those tools to share messages and information when working remotely. Another often-used tool for these teams is video conferencing software. For example, remote team members can host meetings using this software to see and hear one another as if they were working together in person. They can also make presentations and share their screens while on video. Video collaboration can also offer more flexibility because individuals don't have to travel to a location to meet, so some in-person offices may also use it to save on travel costs.

Cloud collaboration

Cloud collaboration represents another form of virtual collaboration. With cloud tools and software, employees can work on the same document from different locations. These documents update in real time, allowing collaborators to share, review and edit them and see the latest changes as they occur. This type of collaboration is also effective for hosting and sharing large files within the organization. Teams can create cloud-based folders, allowing them to gather and share documents in a central location for all necessary parties to access.

Cloud collaboration can support community collaboration efforts, allowing individuals to share their knowledge easily from various locations. This collaboration can help improve efficiency on projects. For example, rather than having one individual create a presentation, email it to their team members and wait for everyone to review it and send separate responses, they can share a link. Recipients can comment directly on the document, allowing the creator to review them and respond as needed.

Strategic alliance

Strategic alliances are a type of external collaboration that occurs when two or more organizations work together toward a common goal. They may enter these agreements for short- or long-term purposes. Some partnerships involve binding agreements, which establish each parties' responsibilities in the relationship. Failure to meet those responsibilities can lead to conflicts. In these collaborations, the business partners share their knowledge and resources, often supplementing what the other doesn't have or offer.

This type of collaboration can support various purposes for businesses. For example, an organization may want to implement an internal learning platform for its employees. Rather than create content itself, the business can contract with a vendor who provides educational courses, videos and other resources for the platform. Organizations may also form a strategic alliance to enhance their brand awareness. For example, a grocery store may partner with a local coffee company to provide in-store kiosks. Shoppers get to interact with both brands at the same time, and this alliance may encourage the partners' audiences to support one another.

Network collaboration

With network collaboration, people may work with others in pursuit of individual goals. These networks can exist in person or through digital formats, and the members of the network may not always know one another personally. People can contribute to the network by sharing information or expertise for others to use for their own benefit. Eventually, network members may even develop stronger relationships and rely on one another to help with specific goals or tasks.

Social media platforms represent a common form of network collaboration. On social media, individuals can communicate with other people and join groups for various purposes, such as gathering advice or discussing topics of interest. For example, someone seeking a job may create a post on a professional networking site asking if anyone knows about any openings in their desired field. People in their network can respond to the

post with details about job opportunities or links to resources that might help the individual with their job search.

3.2.1: Stage/elements of collaboration

The five steps of collaboration are:

- Commit to collaboration.
- Co-define the dilemmas.
- Co-design the process.
- Co-create solutions.
- Co-deliver actions.

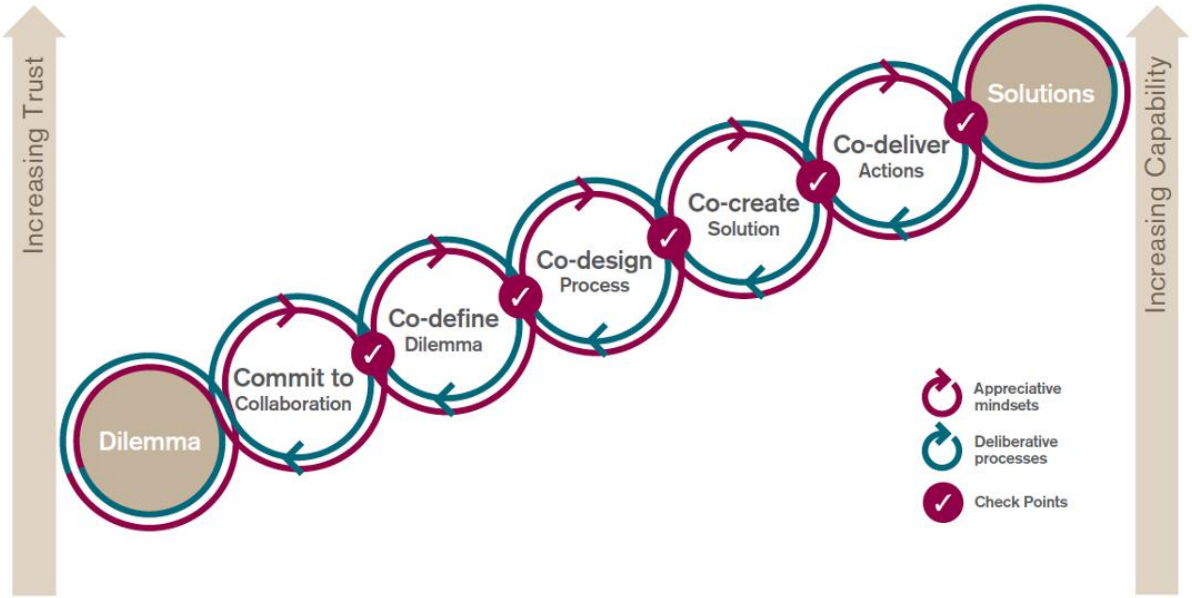

Figure 3: Stage of collaboration

Collaborative modeling refers to the use of well-known requirements analysis and modeling techniques in a collaborative fashion to build and maintain a shared understanding of the problem space and the potential solution. Collaboration Model a conceptual management and communication tool designed to work with a large number of geographically dispersed subject matter experts' model describing routine interactions between networked entities that can be supported by information systems integration.

Four main types of collaboration models:

- Alliances,
- Portfolios,
- Innovation
- Networks, and Ecosystems.

3.2.3: Elements of Successful Collaboration

Just putting together a group of people is no guarantee of success, no matter how skilled each individual may be. Every strong leader, whether in sports, business, Health or any other aspect of life, must bring together six key facets of teamwork:

1. **Motivation.** Motivating a team to be first to market, or to create the best possible customer experience, is a key element.
2. **Communication**. It is important to recognize the difference between communication – a one-way process where a single person is responsible – and collaboration – where a group takes responsibility and agrees on how to achieve the same thing. You can communicate without collaboration, but you can't collaborate without communication. From setting out specific objectives and roles, to keeping a team informed of progress and challenges, strong communication is vital to team achievement.
3. **Diversi**ty. Just as a soccer team would fail if it consisted of eleven center-forwards, a business team will flounder if it consists of identical personality types or roles. A variety of personalities and demographics brings a far broader range of perspectives.
4. **Sharing**. Making sure that everyone is recognized, and that findings are shared across the team, leads to stronger bonding and deeper understanding. Other shared information, such as calendars and scheduling, can also lead to team efficiency. check everyone's availability, and suggest suitable times. When a team member no longer spends time chasing dates, they can devote more attention to the core objectives of a project.
5. **Support**. When everybody supports each other, without finger-pointing, the team dynamic is infinitely more powerful. Those able to express ideas in a supportive environment are more likely to make breakthroughs, whereas teams with a blame culture repress innovation. Mistakes can be some of the most powerful learning opportunities in a supportive group.
6. **Problem-Solving**. Any collaboration is about solving problems, so a group that can't solve problems can't work. This often links back to team diversity – including some problem-solving personalities in the group is essential. This can mean looking beyond the obvious – sometimes it may be an engineer who

solves a marketing problem, and a customer service clerk who identifies the flaw in a new app design. Diversity and problem-solving often go hand-in-hand.

3.3.4: Importance of successful collaboration (Benefits of effective collaboration in an organization)

Collaboration is important and necessary since no single individual can finish the work, solve the problem, or reach the objective alone. Rather, we need to pool a diverse range of other people's skills and expertise..

The primary purpose of collaboration is to improve the way your team works together and solves problems. This results in increased employee satisfaction, increased work efficiency, enhanced problem solving, boost productivity, and increase profitability. Improve results and brings a success.

Benefits of Collaboration in the Workplace

- **Increased Employee Satisfaction**

Among the top benefits of collaboration in the workspace is the increased employee satisfaction.

Workplace collaboration contributes to the creation of an atmosphere in which employees feel appreciated for both their individual abilities and their input. Employee happiness not only has a positive impact on company culture, but it can also lead to increased retention.

- **Increased Efficiency**

Digital work collaboration especially during remote work increases the efficiency of business operations. When team members collaborate in a positive and supportive atmosphere, they are more likely to fulfill project deadlines. in addition, It assists in increasing the transparency of your initiatives, which encourages greater accountability and facilitates cross-team collaboration.

- **Enhanced Problem Solving**

Collaboration in the workplace helps enhancing problem solving skills for employees.

Working in a team with a diverse range of talents and ideas makes problem-solving easier and faster than working alone. When multiple individuals focus their expertise and share the burden, the time it takes to address difficulties is significantly reduced.

- **Boosts Productivity**

Keeping everyone informed about project progress, new possibilities, and future obstacles encourages conversation, which allows you to speed up the creation and execution of solutions. Working in a collaborative environment makes employees more responsible and motivated.

Boosting employee's productivity should be considered as the top benefits of collaboration in the workplace that organizations must have.

- **Improves Agility**

Organizations must be more agile than ever before in order to handle various disruptive challenges. They must be digitally native in order to easily alter business models and respond faster to new challenges.

- **More Productive Meetings**

One of the major benefits of collaboration in the workplace is that it improves meeting efficiency. By proactively recording their job progress, team members will require fewer meetings to complete their duties.

- **Increased Profitability**

When a good and encouraging corporate culture is established, employees collaborating in the workplace will give their all to meet their goals, which will have a beneficial impact on the overall growth and profitability of the firm.

- Unfettered innovation
- Collective knowledge
- Enhanced teamwork
- Maximum redundancy
- Minimal oversight
- Maximum performance
- Effective analytics
- Accessible data
- Efficient processes
- Overall happiness

3.2.5: Current challenge

Achieving an effective collaboration in the workplace doesn't come without challenges

The five most common challenges that face healthcare teams relate to accountability, conflict management, and decision-making, reflecting on progress, and coaching. These challenges were similar across both clinical and administrative team.

Collaboration challenges.

- Misunderstandings. ...
- Transparency. ...
- Collaboration. ...
- Miscommunication. ...
- Low trust and mutual respect. ...
- Ineffective communication channels and protocols. ...
- Manage conflict constructively. ...
- Handle differences in culture and values

Group discussion
What are the common challenges for collaboration in health care?
Share your experience

Challenges in Health care

- Lack of time and compensation.
- The need to deal with multiple pharmacists/physicians.
- Concern about lack of face-to-face communication and the potential for multiple care provider involvement to result in more fragmented healthcare delivery.
- Concerns regarding patient responsibility.

Proposed solution

- Set ground rules to keep them on track. Group learning/Task may encourage students/employees to engage in conversation, but you also want to make sure they stay on topic and task. ...
- Establish roles for each student./Employee ...
- Establish group goals. ...
- Consider assessment. ...
- Build trust. and promote open communication
- Keep groups midsized. ...
- Establish flexible group norms. ...
- For larger tasks, create group roles. ...
- Create a pre-test and post-test

Summary

It takes time and effort to create a collaborative workplace, but the result is well worth it. Organizations risk losing their potential to develop and boost results if they do not engage in effective and digital collaboration.

Every company/Institution should strive to provide the greatest atmosphere for workers to thrive and, as a result, develop their business by implementing effective collaboration.

Chapter 4:- Team-working

Chapter Duration:- 180min

Description: - In the current era of healthcare service institutions, the importance of fostering successful teamwork is paramount for delivering effective healthcare. Thus the focus of this chapter is to equip participants with the required Knowledge, skills, and attitude during teamwork that is necessary for the successful delivery of care in a health setting and it addresses Principle of team-working, Type of team-working, Component of successful Team-work, Importance of successful team working, Challenges/barriers to successful team-work and solution for successful team-work

General objective

At the end of this chapter, the participant will be able:-

Analyze the principle, type, importance, challenge, and possible solutions for effective teamwork

Specific objectives

- Define team-working
- Analyze proper Principles of team-working
- Identify the Type of team-working
- Discuss Component of successful Team-work
- Discuss the Importance of successful team working
- Outline Challenges/barriers to successful team-work
- Design proper solutions for successful team-work challenge

Session outline

Session outline

Session 4.1:introduction and Principle of team-working

Session 4.2:Type of team-working

Session 4.3:component and Importance of successful team working

Session 4.4:Challenges/barriers and proposed solution for challenges of successful team-work

Session 4.1: Introduction and principles of team working

Session duration: 30'

Session objectives

At the end of this session, participants will be able to:

- Define team working and multidisciplinary team
- Explain team-working
- Analyze basic Principles of team-working

Activity 4.1: Think pair-share Question: explain Team-working and multidisciplinary team Instruction ❖ Time allowed 10'

4.1.1: Introduction and principles of team-working

A team: - is a special collection of two or more people who interact with each other and perceive themselves to share some common interests or to accomplish a certain activity.

A Team is a collection of individuals organized to accomplish a common purpose, who are interdependent, and who can be identified as a team by themselves and supervisors.

Teamwork in health is defined as two or more people who interact interdependently with a common purpose, working toward measurable goals that benefit from leadership that maintains stability while encouraging honest discussion and problem solving.

Teamwork: - is a special ability to work together towards a common vision and/or individuals working together to accomplish more than what they could do alone.

Multidisciplinary team is a unit of health care professionals who specialize in different fields and work together. A multidisciplinary team may work with multiple patients, but each patient receives individualized attention from each team member. This unit collaborates on a detailed care plan to organize their services, optimize treatments and define specific objectives.

Multidisciplinary teams allow patients to receive comprehensive, individualized care from experts in specific disciplines. The collaboration of specialists can help a patient receive the services and treatments they need. These professionals can meet a patient's complex needs without neglecting or ignoring issues that may exacerbate existing conditions. These professionals can communicate with one another to discuss any potential challenges, such as medications that may interact with one another.

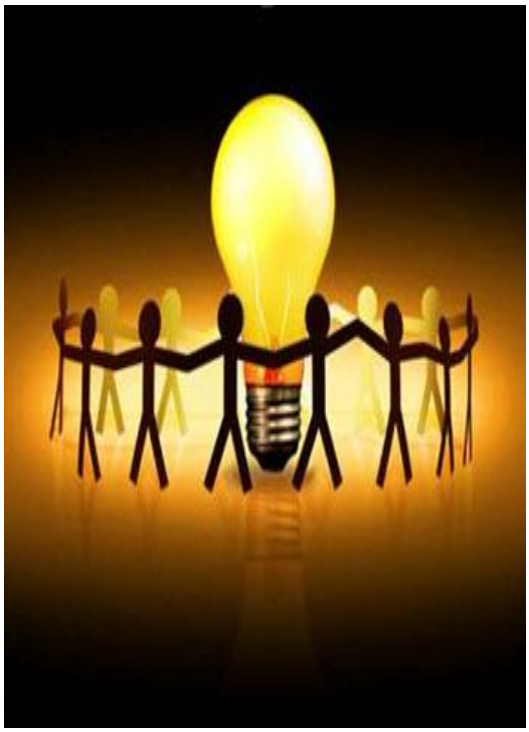

Figure 4: team and team-working in work place

4.1.2: Principle of team-working

Team work has basic important principles that the professional with in a team should for to achieve the planed goal. There are a numerous principles. The most common one include

- **Shared goals.** The team including but not limited to (patient, family members or other support persons, different health professionals and leaders) who works together to achieve establish shared goals that can be clearly articulated, understood and supported by all team members.

- **Clear roles.** There should be clear expectations for each team member's functions, responsibilities and accountabilities, which optimize the team's efficiency and often make it possible for the team to take advantage of division of labor, thereby accomplishing more than the sum of its parts.
- **Mutual trust.** Trust is a vital component of a team which fosters innovation, sharing, collaboration, and productivity. To build trust among team members, assess trust, understand gaps, and incorporate positive changes. Team members earn each other's trust, creating strong norms of reciprocity and greater opportunities for shared goal achievement.
- **Trust is Essential and core in strengthening Team Effectiveness**

- Trust encourages risk raking that Allows team members to challenge the normal way of doing things and help the team to encourages the discovery of more innovative solutions
- Trust facilitates information sharing because it Enables team members to have open honest conversations and help to fosters a feeling of confidentiality - "what's said in the room stays in the room"
- Trust encourages collaboration because it Allows the team members to spend more time working together than protecting themselves or "watching their backs"
- Trust enhances productivity because it enables team members to put aside personal goals to achieve common team goals and help to Foster commitment of every member to work together efficiently

Tips on Trust Building process with in a team

- ***Be honest:*** *be upfront and truthful even with difficult conversations*
  - *Getting caught in a lie destroys trust*
- ***Show people you care:*** *genuinely care about other people's interests as much as your own*
  - *Being "me-oriented" sets off alarms*
- ***Trust others:*** *give the benefit of the doubt until you have data to the contrary*
  - *Jumping to conclusions inspires mistrust*
- ***Address issues directly:*** *confront the problem to improve the working relationship*
  - *Avoiding issues erodes trust*
- ***Share relevant information:*** *share knowledge, interests, and experiences to create common ground*

- *Blindsiding someone breaks trust*

- ***Follow through on commitments:*** *act responsibly and reliably by carrying a fair share of the workload*
  - *Missing deadlines (without prior discussions) makes you seem unreliable*
- ***Say "no" when you mean it:*** *let the other person have their needs met elsewhere if you truly can't handle additional work*
  - *Saying yes without follow through leads to others doubting your commitment*
- ***Share what you know and what you don't:*** *be generous with your knowledge but admit when you don't have the answers*
  - *Acting like a "know-it-all" alienates people*

❖ **Effective communication.** The team should prioritizes and continuously refines its communication skills. There should be consistent channels for candid and complete communication, which are accessed and used by all team members across all settings.

❖ **Measurable processes and outcomes.** The team agrees on and implements reliable and timely feedback on successes and failures in both the functioning of the team and achievement of the team's goals. These are used to track and improve performance immediately and over time.

Summary

1. Compare and contrast group versus team, team-working and multidisciplinary team?
2. Discuss the principle of team-working in health care?

Session 4.2: Type of team-working

Session duration: 45'

Session objective

At the end of this session participant will be able to:

- Identify different type of team-working health care setting
- Analyze the characteristics of team-working

Activity 4.2: gallery walk

Questions Compare and contrast the character, importance, advantage and disadvantage of different type of team-working Instruction Divide participants in to groups assign role for each group prepare the activity with flipchart present to the large participants time 30’

4.2.1: Type of team-working

Team exists within a larger organization and interact with other teams and the organization. Teams are a way for an organization to gather input from members and provide members of the organization with a sense of participation in the pursuit of organizational goals. In addition, Team allows organizations flexibility in assigning members to projects and allow for the formation of cross-functional groups. Though type of team varies based on their goal the most common type of teams are Project Team, Operational Team, Virtual Team, Self-Managed Team, Problem Solving Team, Informal Team and Leadership Team. Here are the seven teamwork examples to consider which style is most effective for your unique team dynamic: –

- **Project Teams: –** A project team represents a group of individuals with shared goals and strategies. Tasks in a project team are specifically structured with stipulated deadlines, roles and responsibilities, etc. The members of a project team are usually gathered to work on a specific project or objective. The members may be from the same department or from different departments depending on the requirements of the project. Project teams are usually brought together for a specific time period and eventually disbanded after the project is completed. Team members are under the supervision of a project manager and report to him. Efficient functioning of the project team requires smooth collaboration and communication among the team members. Project teams are further divided into four categories, as follows
- **Functional Teams**: – Functional team consists of a group of individuals with specific skills and education. Functional team include members of the same department. When working within these team, you share different responsibilities than other members. For example, the marketing team is

concerned with brand promotion and awareness; the sales team is responsible for driving revenue, and so on. All the members of the functional team work towards the achievement of a common goal associated with the organization's goal. This team is usually permanent and managed by a manager who leads the projects. All team members report to the manager.

- **Cross-Functional Team**: – Cross-functional team, as the name suggests, are teams whose members are selected from different departments for projects that require diverse skills. Cross-functional teams share similarities with functional teams, with the primary difference being that team members come from various departments. Teams tend to work together on a specific project and often split up after the project is completed.
- **Matrix Team**: – Matrix team works according to matrix management approach where team members report to more than one boss i.e., two boss metrics. Working in a Matrix team requires a lot of patience as individuals have to deal with two bosses, which can be cumbersome. Also, it can create confusion in the team and create difficulty in the decision-making process.
- **Contract Team**: – Contract team is the last of the project teams. Contract team is assembled by outsourcing resources. The company signs a contract with the team for a specific project. Once the project is complete, the organization can disband the team. Contract teams often work remotely which makes it difficult for the Project Manager to lead the team. He has to communicate with all the team members and monitor their performance to ensure the team is on track.
- **Operational Team: –**The operational team in an organization is responsible for the smooth functioning of other teams. The members of this team support other teams in carrying out their responsibilities efficiently. They ensure that there is no hindrance in the progress of a project and things are completed on time. In addition, members of an operational team have specified roles and responsibilities. Therefore, they can have their own projects as well. The operation team manages and optimizes work in an organization to ensure profitability. It supports other teams to help them achieve their goals successfully.
- **Virtual Teams: –** Virtual team do not interact in real life and rely on different tools to collaborate in their work. This team often has members from different geographic regions. Virtual team is the future of the business world. People are looking for opportunities to work from home because of the work-life balance it offers. As a result of remote work. These team bring together creative individuals from different parts of the world, resulting in better ideas and more creativity.

- **Self-Managed Team: –** Self-managed team has no manager or leader. Team members are themselves responsible for decisions and actions. They self-identify and define roles and responsibilities, work together to resolve issues, and set expectations. Self-managed teams have more autonomy and are therefore more flexible. Furthermore, since they define their own rules, they can manage time and tasks as per their choice. The team members of self-managed teams are the most empowered. Each person brings their own skills to the table and adds to the overall efficiency of the team. Also, it has been reported that self-managed teams can be 15-20% more productive than other types of teams. Team members in a self-managed team have more room for improvement and continually upgrade their skills.
- **Problem Solving Teams: –** Problem-solving team is temporarily assembled. They are usually brought together in case of crisis or unplanned event. The purpose of such a team is to solve the problem and get the company out of trouble. The team consists of leaders and team members from different departments who sit together to work out problem solving in the smooth functioning of an organization. The output of this team strengthens the structure of the organization and reduces the risk of potential issues.
- **Informal Team: –** Unlike other teams, informal team is not created by the company but by the employees. This team is not under the supervision of a project manager. As informal team is formed by employees, members communicate more, have better productivity rates, and are more efficient. Individuals in an informal team share common interests and are better connected. They share a strong bond which makes work more fun for them.
- **Leadership Team: –** Leadership team consist of leaders from different departments who work together to devise new strategies to work better. Leadership team members are skilled and experienced individuals. Each person brings their expertise to the fore, and overall, they create a plan for the betterment of the company.

Summary:

Teams in an organization are crucial for achieving organizational goals and providing a sense of participation for members. There are various types of teams, including project teams, operational teams, virtual teams, self-managed teams, problem-solving teams, informal teams, and leadership teams. Project teams are structured with specific tasks, roles, and responsibilities, while functional teams focus on specific skills and education. Cross-functional teams comprise members from different departments, and matrix

teams work according to matrix management. Contract teams are assembled by outsourcing resources, while operational teams ensure the smooth functioning of other teams. Virtual teams do not interact in real life and rely on different tools to collaborate. Self-managed teams have no leader and are responsible for decision-making, while problem-solving teams are temporarily assembled to solve crises. Informal teams are formed by employees with common interests, and leadership teams comprise leaders from different departments who devise new strategies.

Session 4.3: Component/stage of and Importance of successful Team-work

Session duration: 45'

Session objective

At the end of this session participants will be able to:

- Identify the stage/component of team-working
- Analyze the importance of each type of team-working
- Explain the characteristics of each stage of team work

Activity4.3: questions and answers

Questions

1. Compare and contrast the characteristics of each stage of team working?
2. Discuss the steps in establishing success full team-working?

   Instruction

   Form group of participants

   Discuss the question

   Present your group answer to the large group

   Time 10'for discussion and 3' for presentation to the large group

4.3.1: Component/stage and Importance of successful Team-work

- **Forming Stage**: – it is the stage when team members come together and become familiar with each other. It is the training phase, also called the forming phase, is the initial phase of building teams and is the phase where co-workers (different professionals) meet together. It is also a stage where the

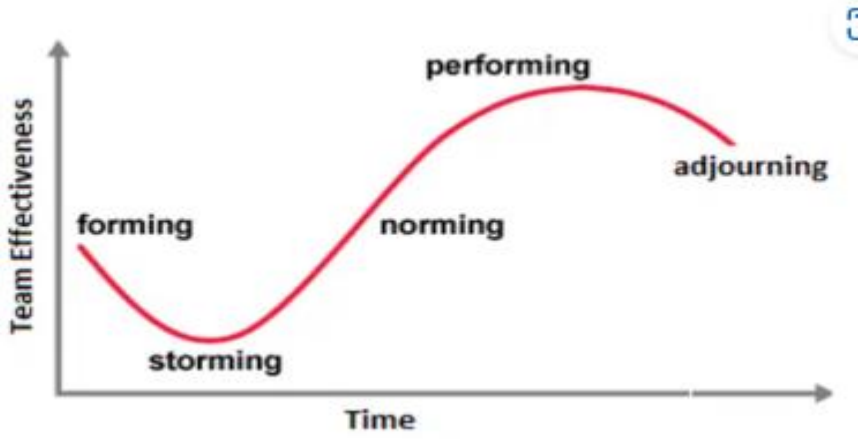
member also assesses group formation and the basic rules that apply to that task. During this stage, team members build their sense of security.

- **Storming Stage: –** The most difficult and important stage is to go through the storming phase. It is a period marked by conflict and competition with the emergence of individual personalities. The storming phase is often where conflict arises. This occurs because employees begin communicating and expressing differing points of view. Team members may disagree on goals, strategy, and responsibilities. In this phase the performance of the team can actually decrease as energy is put into unproductive activities. In this phase, employees may form subgroups or sub-teams with employees who share their values. To get through this stage, members must work to overcome obstacles, acknowledge individual differences, and work through conflicting views on team tasks and goals. Team can get stuck in this phase. Failure to address conflicts can result in long-term problems.
- **Norming/Normalization Stage: –** If the team go through a storming phase, the conflict is resolved and some degree of unity emerges. This occurs because team members form and respect boundaries. Here, the leader of the group emerges naturally if upper management doesn't assign one. In the ideal phase, consensus develops as to who the leader or leaders are, and the roles of the individual member. Interpersonal differences begin to settle, and a sense of unity and unity emerges. Team performance increases during this phase as members learn to collaborate and begin to focus on the team's goals. However, reconciliation is uncertain, and the team could be back in storm if disagreements re-emerge.
- **Performing Stage: –** In the performance phase, consensus and collaboration is well established and the team is mature, organized and working well. In this phase, team members have clearly established rules and boundaries which allow them to work cohesively. Employees work toward the responsibilities assigned and ask questions to clarify their tasks. Employees experience increased motivation to work and have strong productivity. There is a clear and stable structure, and the members are committed to the mission of the team. Problems and conflicts still arise, but they are dealt with constructively. When conflict arises, employees know how to work toward unified solutions. Team members usually have a strong focus and purpose in this phase when their goals align with their co-workers. The team is focused on problem solving and meeting team goals.
- **Adjourning Stage: –** The dissolution phase, also called the adjourning phase, usually involves a decrease in motivation as the project nears completion. There is an emphasis on completing the final tasks and documenting the effort and results. As the workload is reduced, individual members may

be reassigned to other teams, and the team disbands. The team may regret the ending, so formal acceptance of the task and the success of the team can be helpful. If the team is a standing committee with ongoing responsibility, members may be replaced by new ones and the team may go back to a formation or storming phase and repeat the development process.

Main character of each stage of team building process

FORMING	STORMING	NORMING	PERFORMING	ADJOURNING
• Make introductions/ share backgrounds • Create clear project goals and direction • Determine boundaries and acceptable behavior • Build relationships and approach the task • Assess each team members' knowledge, skills, and abilities • Concentrate more on team processes than on tasks • Work together to ensure that everyone is assigned roles/ responsibilities • Begin to establish team norms	• Identify and address unproductive behaviors • Learn to listen and respect different ideas and perspectives • Embrace diversity of thinking and develop tolerance among team members • Allow trust and respect to emerge by working through difficulties • Work out interpersonal differences • Concentrate on problem solving and goal clarification	• Take responsibility for decision making and problem solving • Define how team will progress • Reach agreement on written and unwritten norms for working together • Determine how information will be shared • Agree on how conflicts will be resolved • Decide what tools and processes will be used to get the job done • Share data, explore solutions, and work toward a common goal • Work collaboratively	• Function without oversight of a leader • Become interdependent • Make decisions and solve problems quickly and effectively • Work through issues and reach consensus without disrupting the project • Utilize each team member's strengths • Concentrate more on task than processes • Welcome differing opinions to inform creative decisions • Delegate and share leadership function • Monitor progress, celebrate milestones, and build camaraderie	• Celebrate successes • Capture best practices and lessons learned for future use • Seek opportunities to attain closure • Say good-bye and make arrangements to keep in touch



Tip in establishing successful team

Diversity:- Diversity among team members fortifies the team but extends the process of getting work done

- Types of diversity to consider
  - Age
  - Language
  - Motivation
  - Problem solving ability
  - Religion
  - Race
  - Experience
  - Gender
  - Critical thinking ability
  - Attitude
  - Conflict resolution ability etc.

Team Norms:- Norms are rules that have some amount of agreement and are enforced through certain type of sanctions

- Areas to consider for establishing team norms include:
  - Attendance
  - Contribution
  - Courteous-conversations
  - Decision-making
  - Enforcement
  - Handling disagreements
  - Participation
  - Punctuality
  - Tasks-assignments

Team Size:-

- Small teams are typically more productive than large ones
  - Teams that are too small have difficulty accomplishing tasks – not enough people to share the work

- Large teams enable shared responsibility and accountability
    - Management problems on very large teams may outweigh the incremental resources additional people provide
- Tasks determine the size of the team (it varies 4-20)

4.3.2: Importance of successful team working

In the current health care institutions teamwork became an important health intervention for a number of reasons.

- Clinical care is becoming more complex and specialized, forcing medical staffs to attempt complicated health services and quickly learn new methods.
- Aging populations, the increase of chronic diseases like diabetes, cancer, and heart disease have forced medical staffs to take a multidisciplinary approach to health care
- Researchers have found that working together reduces the number of medical errors and increases patient safety
- Teamwork also reduces issues that lead to burnout No longer is one person responsible for the patient's health; today, an entire team of health workers comes together to coordinate a patient's well-being
- Health teams help break down hierarchy and centralized power of health organizations, giving more leverage to health workers
- Teamwork is centered on solid communication, patients and their families sometimes feel more at ease and report they accept treatments and feel more satisfied with their health care Health workers are also found to be more satisfied with their work . A study found nurses who go through successful team building efforts are more satisfied with their work .

4.3.3: Challenges and solutions to successful team-work

Teamwork challenges are a natural part of managing a team, and effective managers know how to identify a challenge and provide a solution. Understanding how to address and resolve teamwork issues can help keep morale and performance levels high.

The ability to keep staff working together as a team can significantly improve production for your department or company. In order to solve any disagreements or problems, it's beneficial to understand the most common

workplace teamwork challenges and effective solutions for each. Although there are some challenges that are unique to each industry or field, some common teamwork challenges are:

- **Lack of clarity**

  When a team is working on a specific task, it's important for them to understand what you expect from them so that they are best prepared to deliver satisfactory results. When a team does not know what their goal is, it can lead to inefficiency from a lack of focus or from performing work that does not fit into the larger goals of the task.

  The most effective way to ensure team understanding is to speak with a team at the start of an assignment, then check in over the course of it to ensure their work shows an understanding of the project's needs. Putting key expectations in writing removes any uncertainty and provides a reference for the team when needed.

- **Trust issues**

  Establishing trust between coworkers/team members is important for team productivity. Trust allows the team to request assistance or offer help to others, which can help everyone on the team solve problems more quickly and effectively.

  Trust can form naturally both through professional performance and personal bonds. When trust is low with in a team, it affects team performance, team-building activities may help you establish those bonds between your team so they are better prepared to work cohesively.

- **Personality conflicts**

  Individuals all have their own preferences and personalities, and occasionally this can lead to situations in which two employees have a tendency to disagree. This can lead to decreased morale or poor cooperation.

  Members should help each other to minimize the likelihood of personality clashes by considering team work culture and existing staff when hiring new employees in the team. When clashes occur between two current employed members, leader should resolve them by adjusting assignments to reduce their interaction or providing mediation services to resolve disagreements.

- **Withholding information**

  Sharing project-related information helps teams succeed, so when one or more team members keep information away from a coworker/other members, it can have a detrimental effect on team performance. When an employee operates with incomplete information, they may miss an opportunity or perform unnecessary work.

It's beneficial to emphasize the importance of sharing valuable information throughout the staff and to model this behavior when you share new information with relevant team members. This can help team members understand that personal or professional motivation should not overrule the best interests of the team.

- **Lack of communication**

Open communication helps every team member know what to expect from their coworkers as well as what their coworkers expect from them. This raises the overall reliability of the team, minimizing productivity loss due to duplicate work or delays.

One of a manager's responsibilities is ensuring staff have several methods of communicating and coordinating with each other. Besides encouraging staff communication, organizing meetings, creating an email chain or using a group messaging software can help facilitate important conversations.

- **Reduced engagement**

Team members who feel a connection to their work are more likely to produce positive results. Engagement helps a team members maintain focus and enthusiasm, which can increase both the quantity and quality of their output. When members loses their connection to a project, it can lead to a reduction in productivity.

Manager should emphasize the importance of an employee's work and communicate how they're equipped to do the work well. Additionally, by showing results, he/she may help member of team find meaning in their work.

- **Excessive staff numbers**

While you can often expect a larger staff to produce more results, when your staff grows too large for the project, it can result in a drop in overall efficiency. By attaching too many team members to a project, there may not be enough work to go around, and you may also experience duplicate work or increased tensions.

To maintain staff productivity, you may need to reassign or remove staff members from a large project. In doing so, you may be able to delegate other work to the reassigned staff, allowing your organization to be productive in other areas while still maintaining its project goals.

- **Interior competition**

While some competition within your staff can be beneficial, with employees encouraging one another to perform at their best, some staff members may be too competitive. When staff are overly competitive,

they may be less likely to communicate or to help each other, which can increase the chances of mistakes happening or team members withholding important information from one another.

Managing employee competition requires a fair application of reward structures and a continued emphasis on collaborative work. One way to minimize harmful competition is to reward goals that a team achieves together, calling attention to each employee's contributions.

- **Philosophical differences**

Even when staff are working toward the same goal, they may have different beliefs about the best way to pursue this goal, and this may lead to inefficiency when each staff member operates according to their personal preferences.

Having firm leadership can help reduce the effect of philosophical differences. By allowing all team members to express their concerns and preferences while still making a final decision for the team, you can balance listening to your staff with executing a unified project approach.

- **Habitual clashes**

Although clear work expectations and documents provide structure for your staff, an employee's personal habits may still dictate some of their workplace behavior, which may cause conflict with coworkers. Habitual differences can include dining, organizational and sanitary habits.

Creating an employee code of conduct is one way to reduce the opportunity for habitual clashes. An effective code of conduct should balance personal freedoms with rules that benefit the entire staff by identifying potentially inconsiderate or confrontational behaviors.

- **Opposing goals**

It's important to keep your team members working toward a unified end product to maintain both morale and consistency. When staff members pursue goals that are in opposition to each other, it can lead to incompatible or even contradictory work.

Maintaining a focus on the same goal requires regular oversight of staff, watching for any indications that an employee's work shows their goal may differ from your intended goal for the project. Providing targets and expectations in writing can help keep staff aligned with your vision.

- **Working in isolation**

Careful project management is essential on projects with many individualists. When a project involves many staff members working on individual assignments with minimal direct interaction, this can increase the possibility that their work does not integrate easily once they complete it.

By serving as a supervisor or assigning a supervisor to the team, you provide management that can identify when staff work shows signs of misalignment. Scheduled staff meetings can also help, as they allow staff to hear more details on their peers' work and allow you to make adjustments quickly.

- **Lack of self-awareness**

An individual who has poor self-awareness may cause problems within your team. Lack of self-awareness can trigger many other types of conflict on this list by leading to interpersonal problems, work-related resentment and more. Often, the employee may not realize they are creating problems, but they may detect issues with their coworkers while not being able to identify what they have done to cause them.

The best solution for an employee with poor self-awareness is often to have a private conversation. This allows you to address the concerns in a gentle but direct way while providing any necessary encouragement to boost the employee's morale.

- **Skill overlap**

When constructing a team for a project, one primary goal is to fill the skill and duty needs as efficiently as possible. When too many staff members share skills or specialties, this creates inefficiencies and may lead to conflict.

Careful consideration when choosing team members for a project can help you find the right balance of skills. When a team needs to adjust to new projects or requirements, you may benefit from identifying an employee capable of developing new skills to diversify the team.

Summary

Establishing the right type of team and having successful teamwork is a key to achieving the intended goal and getting shining results in healthcare delivery institutions. Effective teamwork needs identification of the right type of team based on seated goals, traveling through the right path/stage, properly following the basic principles of team and team-working, identifying common challenges and giving prompt solutions for them, and establishing proper monitoring mechanisms with dynamic leadership.

Chapter five: special issues in communication, collaboration, and team-working

Duration: 180'

Description: this chapter is designed to enable participants understand and apply recommended methods and procedures that are necessary for strengthening effectiveness of communication collaboration and team-working in health care setting the title of this chapter include leadership issue, monitoring and evaluation and tools for communication, collaboration and team working.

General objective

At the end of this chapter participants will be able to:

- Identify and apply special issues(leadership monitoring and evaluation ,tools for communication) that help to strengthen and sustain effective communication, collaboration and team-working

Specific objective

- Determine methods of improving communication, collaboration, and team working
- Develop tools/protocols for effective communication
- Recognize leadership/management, issues during effective communication, collaboration and team-working
- Apply monitoring and evaluation in Effective communication, collaboration and team-working

Session outline:-

3.1. Overview of a special issue (Introduction and purpose)

3.2. Leadership and management issues

3.3. Tools/protocols for Effective communication

3.4. Monitoring and evaluation

Session 5.1: Overview of special issue (introduction and principles)

Session duration: 30'

Session objective

At the end of this session participant will be able to

- Provide overview about general characteristics of effective leader during communication collaboration and team working
- Identify effective way of leadership path during communication, collaboration and team working in work place

Activity 5.1: think-pair-share

Questions

- Explain effective characteristics of a leader during communication in team work?

Instruction

Time 10'

Ask participants to think individually about the question for 2' then again ask them to make a pair of 3 participant and discuss their thought for 5' then finally ask each group to shear for whole group for 3'

5.1.1: What makes a great leader?

When Chris Hadfield was commanding the International Space Station, he learned that it's not about seeking out individual greatness to make yourself look good. Instead, he found that excellent leadership is about building up the people around you: trusting them, empowering them, and ultimately, enabling them to contribute their expertise so that the team can become more than the sum of its parts. In other words, effective leadership and cultivating a culture of effective teamwork go hand in hand.

"Ultimately, leadership is not about glorious crowning acts. It's about keeping your team focused on a goal and motivated to do their best to achieve it, especially when the stakes are high and the consequences really matter. It is about laying the groundwork for others' success, and then standing back and letting them shine."

— Chris Hadfield, astronaut and former Commander of the International Space Station

Figure 5.1: sample leadership role

5.1.2: Importance of teamwork and leadership

Teamwork and leadership are important because they create an environment where every team member feels valued and has a sense of ownership in the success of the team and the overall vision of the company. When there is strong teamwork and leadership, it creates a positive work culture that promotes collaboration, open communication, and accountability.

In practice, this means that team members are motivated and engaged, everyone has a clear understanding of their role and responsibilities, and there is a shared commitment to achieving team goals. This leads to improved productivity, better problem-solving, and increased morale.

To help your team succeed, you can take action every day such as:

- Communicate clearly: Make sure everyone understands the team's objectives and their individual roles and responsibilities.
- Lead by example: Show your team what you expect by setting a positive tone, demonstrating good work habits, and holding yourself accountable.
- Foster collaboration: Encourage your team to work together, share ideas, and support one another.
- Provide feedback: Give constructive feedback to each team member regularly, both to recognize their successes and to help them identify areas for improvement.
- Celebrate successes: Take the time to recognize and celebrate the team's successes, both big and small. This helps build morale and reinforces the importance of teamwork in achieving goals.

5.1.3: Characteristics of a good leader

Cultivating an environment of teamwork starts by building trust and rapport; by being the kind of leader that teams want to follow. The best leaders share the following characteristics — no matter their leadership style or personality.

1. Strong communicator

Being a leader is inherently about people. Yes, there are KPIs and products to deliver, but you don't lead KPIs: You lead people, with that in mind, perhaps no characteristic is as valuable to a leader as effective communication skills. Every single day leaders should communicate: to motivate, instruct, correct, and a hundred other things. Positional leader who lacks confidence in this area, consider investing in training or practices that will help you improve and gain confidence.

2. Emotional intelligence (EQ)

Speaking of working with people: Leaders must be able to understand and adjust to the emotions of others, including nonverbal and contextual signals. Great leaders go beyond merely identifying emotions in others — they have the soft skills to help others manage their way through strong emotional responses and to push teams and individuals toward the right outcomes.

Emotional intelligence is essential when leading a team through the five stages of team development. Leader will use this skills throughout, most of all in the "storming" stage.

3. Analytical

Strong leaders also tend to demonstrate strong analytical skills. An analytical leader can take stock of a situation, consider possible paths and likely outcomes, and chart the course most likely to succeed. This skill set provides value no matter your role, and it becomes increasingly valuable the more authority a person has.

Activity 5.2: questions and answer

Questions

1. Discuss the ways effective leaders follow to manage collaboration and team working in an organization?

   Instruction

   Time 20'

   be in a group of 5 participant and discuss the question for 15' and present to large group with flip chart 5'

5.1.4: Effective ways leaders can help manage their teams in communication, collaboration and teamwork

Beyond the above listed characteristics or traits of effective leaders, every leader can take actionable steps to lead teams better and encourage greater teamwork. This may include

4. Foster open and honest communication

Create an environment where openness and honesty in all aspects of communication are encouraged. Ask people to share their views and talk about the obstacles in their way. Ask for (and listen to) feedback. Don't be afraid to ask questions yourself. (Here are five you should add to your regular practice, in fact.) Most of all, ensure your team members have a clear path to your door if they need it.

5. Helpful communication tools

Use Channel-based open asynchronous communication and business chat and A project management platform that helps teams understand and communicate about work and workflows in your organizations

6. Create collaborative goals

At the outset, goals should be clearly set and defined. Getting this right at the start may take a little extra time and planning, but it pays major dividends. For the best outcomes:

- The team needs to buy into the goals (so plan them together).
- Everyone involved needs to be aligned on what success looks like (identify important KPI of your organization and shear at the start) Leaders need to acknowledge and support the team throughout the process (so check in frequently and offer guidance where needed).
- Create the KPI with the team

7. Celebrate their success

Good job, team! Never forget to laud good team efforts, ideas, or targets met. Share your team's successes with the company at large and champion them to leadership. You can even organize a lunch or dinner for big wins where every team member can share the achievement. However you choose to mark the moment, do it together?

Ways to celebrate successes

- Celebrate a successful project with an outing (on the company).
- Distributed or virtual teams can't go out, but they can enjoy activities such as a virtual escape room.
- Use digital recognition or praise tools (such as in Microsoft Teams).
- Recognize outstanding contributors with a tangible award (badge, trophy, etc.)
- For smaller successes with in-house teams, food is always an option.

8. Allow team members to problem solve

Instead of imposing solutions, encourage team members to brainstorm and develop their own suggestions. By giving your team space (physical, metaphorical…) to find the right solution and propose their ideas, you can empower them to think creatively, develop their confidence, and foster a sense of ownership.

Helpful problem-solving tips

- Before anyone starts problem-solving, be sure they can accurately restate the problem.
- Listen more than you think is necessary.
- Give space for all parties to share and advocate for their position.
- Encourage the team to come to a shared decision on their own.
- If that fails, as a leader, you should calmly and firmly make a choice — and explain the reasoning behind your decision-making.

9. Provide adequate resources and training

A great leader doesn't just help their team members to do their current jobs. Great leaders help them identify room for advancement to develop their skills and progress their careers. Support your team by giving them the resources they need to excel and reach the next level.

10. Accountable

In your time as a leader, things won't always go perfectly smoothly. You might even make a few bad calls. (Hey, you're only human.) When things go wrong — when a project goes off track , when the unexpected happens — you need to face it head on. Take responsibility and work with your team to address the issues and get back on target.

Accountability tips

- Demonstrate effective time management skills by completing your own tasks on time. Doing so demonstrates strong leadership skills and shows your whole team that you practice what you preach.
- Apologize when appropriate — whether to individual team members or to a larger group of people, an apology from a leader demonstrates vulnerability and transparency. You'll show that you're still working on your own competencies and weaknesses, and you're willing to admit when you're wrong.
- Focus on outcomes, not just task completion. You can check every box on your to-do list, but if your team doesn't reach the appropriate outcome, the whole team — and you — share in the blame. "I

did my part" shows a task-oriented mentality. "How can we do better" or "How can I help" shows a focus on outcomes.

11. Keep the eye on the big picture

As a leader, you need to strike a balance between zooming in on the details and zooming out to see the big picture. In other words, you must ensure your team is accomplishing the day-to-day tasks without losing sight of the overarching goals you're working toward and how the team contributes to those goals.

It's a balancing act, but it's one that any great leader needs to learn how to do.

Why keeping big picture thinking is important

Like staying focused on outcomes, big-picture thinking doesn't spend all day chasing rabbits or putting out fires. Yes, fires need to be put out, but someone has to be responsible for refocusing the team as soon as the smoke clears. If you can keep the right focus, you'll stabilize your team and help them find synergy.

12. Show some empathy

According to inspirational leadership author Simon Sinek, empathy "is the most important instrument in a leader's toolbox." Simply asking, "Is everything okay?" demonstrates you care about the team member and

Examples of empathetic approaches

- If an employee starts crying in your office (or over Zoom), whatever was at the top of the agenda takes a back seat. Soften your tone and ask what you can do to help.
- When performance issues arise (say, consistent late starts to work), ask questions before you jump to consequences. We're not suggesting being laissez-faire about misconduct. But we are suggesting asking an employee about the factors contributing to the lateness.
- When team members are frustrated, don't jump straight to solutions. First, enter into the frustration — find out the root cause and validate that frustration. Then you're ready to apply solutions.

13. Build strong one-on-one relationships

One-on-one meetings are a great way for a team leader to build relationships. They also allow each team member to put their case forward for personal improvement or raise issues blocking them from performing better. Listen to what your team members say and do your best to support them.

Relationship-building tips

- Coffee with the boss: Take team members out for coffee (usually two at a time feels more natural than one-on-one). Don't talk about work. Ask about their dogs, their kids, their hobbies, and tell them about yours. (Virtual teams = virtual coffee break, sanctioned "unproductive" time with the boss.)

- Unstructured meeting starts: Don't jump into team or department meetings too quickly. Intentionally leave a few minutes at the start for unstructured conversation, which can result in impromptu team building. These unstructured starts work naturally in person — people begin to talk, and relationships grow. For virtual teams, you may need to prompt with some questions ("Anyone do anything exciting this weekend?").

14. Build respect

Great leaders demonstrate respect for team members in many ways, particularly by being engaged with the team and working with them. Great leaders aren't afraid to admit mistakes or take risks. They understand that respect is earned through empathy, compassion, and trust.

Teams generally will not trust or willingly follow a leader they do not respect. They'll follow begrudgingly when threatened into it, but that's no way to build a positive culture. Earning that respect is key to earning trust and willing followers.

On the other side of the coin, team members who know they have their manager's respect are motivated and empowered to do more and work with more autonomy.

Key summary

Being a leader presents constant new challenges, especially in our increasingly remote-first world. But armed with these strategies and have a roadmap toward better teamwork, communication, and trust.

Another component of trust and teamwork is visibility. When it's crystal clear who's doing what and why, teams can move forward with grace and speed. Teamwork provides this visibility into projects, clearing up the mystery and allowing all members of the team to work together toward a common goal.

Inspire your team toward greater sharing, cohesion and teamwork by giving them the ultimate tool for project tracking and collaboration.

Session 5.2: Leadership challenge/issue during communication collaboration and team-working

Duration: 45'

Session Objective:

At the end of this session the participant will be able to:-

- Identify common leadership issue during communication, collaboration and team working
- Discuss solution for leadership problems during communication collaboration and team-working

Activity 5.2.1: Think pair share

Questions

1. What are the common leader ship issue during communication, collaboration and team working in your institution?
2. What is your proposed solution for those leader ship issue identified?

Time:-time allowed 10 minute

Ask participants to think individually about the question for 2' then again ask them to make a pair of 3 participant and discuss their thought for 5' then finally ask each group to shear for whole group for 3'

5. 2.1: General Leadership challenge/issue during communication collaboration and team-working

Leadership issues can take many forms and can arise in a variety of circumstances. Some of the most common types of leadership issues include:

- **Communication breakdowns**: When leaders fail to communicate effectively with their employees, there can be a breakdown in communication that leads to confusion, miscommunication, and a loss of trust.
- **Lack of trust or confidence from followers**: Leaders who are unable to earn the trust and confidence of their employees may struggle to lead effectively and get things done.
- **Poor decision-making skills**: Leaders who are indecisive or who make poor decisions can negatively impact the success of their organizations and create a lack of confidence in their leadership abilities.
- **Difficulty managing change**: Leaders who struggle to implement change can find it difficult to lead their organizations forward, as they may face resistance from employees who are resistant to change.

- **Difficulty in delegating responsibilities effectively**: Leaders who struggle to delegate responsibilities effectively may find it difficult to manage their workload, and may also face frustration from employees who feel overburdened or underutilized.
- **Resistance to change**: Leaders may encounter resistance from employees and other stakeholders when trying to implement change within their organizations.

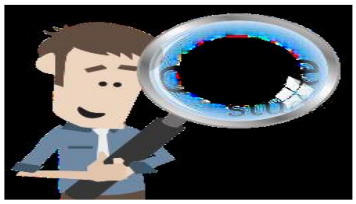
- **Conflicts within the team**: Leaders may struggle to manage conflicts within their teams, leading to a lack of collaboration and teamwork.
- **Inadequate resources:** Leaders may struggle to get the resources they need to accomplish their goals and lead their organizations effectively.
- **Lack of direction or purpose**: Leaders who do not have a clear vision or purpose for their organizations may struggle to get their employees on board and lead their organizations effectively.
- **Inability to adapt**: Leaders who are unable to adapt to new situations and changing circumstances may struggle to lead their organizations in an effective and flexible manner.

Solutions to solve leader ship issue during communication

- Leaders can make an effort to listen actively,
- Be transparent and clear in their messaging, and
- Seek feedback from their team members to understand their perspectives.
- Leaders can be transparent in their decision-making processes.
- Be accountable for their actions, and involve their team members in important decisions.
- To address poor decision-making skills, leaders can seek advice and counsel from others, gather relevant information, and take the time to consider multiple options before making a decision

5.2.2 Leadership Issues on Effective Communication

Activity 5.2 .2: Case study



Questions(case)

Maria, the hospital administrator, had been working at the hospital for several years and was well aware of the communication issues that plagued the staff. Despite various communication channels in place, staff members frequently felt uninformed, leading to misunderstandings and mistakes in patient care. Additionally, staff morale was low, as employees felt frustrated with the lack of clear and consistent communication.

Discussion questions

1. What was the problem in this institution?
2. What measure should Maria take?
3. What are the steps/strategies Maria should follow?

   Instruction

   Time 25'

   Form a group

   Give the scenario for the participant

   Deliver instruction how they accomplish the task

   Prepare and deliver the assignment for large group

   Preparation 15' presentation 5'

5.2.3: Leadership Issues on Effective Communication

Leadership issues related to effective communication are a major concern for healthcare professionals. Effective communication is essential for building strong relationships with patients, colleagues, and other healthcare stakeholders, and for ensuring quality patient care. However, communication challenges can arise in healthcare settings, leading to Misunderstandings, Medical errors and Decreased patient satisfaction.

Here are some of the key leadership issues related to effective communication in healthcare:

- **Active Listening:** Active listening is a key component of effective communication in healthcare. Active listening involves paying close attention to what patients and colleagues are saying, asking questions for clarification, and providing feedback.

- For example, a healthcare professional who is practicing active listening will make eye contact with the patient, repeat back information to confirm understanding, and ask open-ended questions to gather additional information.
- Healthcare leaders must encourage active listening among their staff, and provide training and support to help staff develop their active listening skills. By promoting active listening, healthcare leaders can build trust and rapport with patients, ensure accurate information exchange, and improve patient outcomes.
- **Verbal and Nonverbal Communication**: Verbal and nonverbal communication are both critical components of effective communication in healthcare. Verbal communication refers to the words spoken, while nonverbal communication refers to gestures, facial expressions, and tone of voice.
- For example, a healthcare professional who is using positive nonverbal communication may use a friendly tone of voice, smile, and make direct eye contact. This can help to put patients at ease and promote a positive experience. On the other hand, if a healthcare professional has a tense or worried expression; it may cause anxiety or fear in the patient.
- Healthcare leaders must emphasize the importance of clear, concise, and accurate verbal communication, while also ensuring that nonverbal communication is consistent with verbal communication.
- **Managing Conflicts:** Conflicts are an inevitable part of healthcare, and healthcare leaders must be prepared to manage conflicts effectively. Conflicts can arise between staff members, between staff and patients, or between staff and other healthcare stakeholders, and can result in decreased patient satisfaction and decreased staff morale.

Example conflict may arise between a nurse and a physician about the best course of treatment for a patient. It's important for the healthcare leader to facilitate a conversation between the parties involved to understand the root cause of the conflict and to find a resolution that is in the best interest of the patient.

- Healthcare leaders must understand the causes of conflicts and develop strategies for resolving conflicts in a constructive and effective manner.

Example health care leaders can promote open and honest communication, encourage staff to express their concerns and opinions, and provide training and support to help staff manage conflicts effectively.

- **Clear and Consistent Communication**: Healthcare leaders must ensure that communication is clear and consistent, and that everyone involved in the patient's care understands their roles and responsibilities

  Clear and consistent communication is critical for improving patient outcomes and promoting a positive work environment

Example a healthcare leader may use clear and consistent communication when implementing a new policy or procedure, or when communicating changes in patient care plans.

- **Empathy**: Empathy is the ability to understand and share the feelings of others. This is an important aspect of effective communication in healthcare, as it allows healthcare leaders to build trust and rapport with their staff and patients, and to provide care that is tailored to the patient's needs.

Example a healthcare leader with high levels of empathy may be able to understand the emotional needs of a patient who is facing a serious illness, and to provide support and resources to help the patient manage their emotions.

- **Transparency**: Transparency is an important aspect of effective communication, as it allows healthcare leaders to build trust and credibility with their staff and patients. Transparency involves being open and honest about the organization's goals, policies, and practices, and ensuring that everyone involved in the patient's care has access to the information they need.

Example a healthcare leader may use transparency when communicating changes in the organization's policies or procedures, or when discussing a patient's care plan with their family

- **Cultural Competence**: Cultural competence is the ability to understand and respect the cultural beliefs, values, and practices of patients and their families.

Healthcare leaders must have cultural competence to provide effective care, as patients from diverse backgrounds may have different communication styles, health beliefs, and preferences for care.

Example a healthcare leader may use cultural competence when communicating with a patient from a different cultural background, by being aware of the patient's cultural beliefs, values, and practices, and by adapting their communication style to accommodate the patient's needs.

- **Crisis Communication**: Crisis communication is critical in healthcare, as healthcare leaders must be able to communicate effectively in high-stress and high-stakes situations. Crisis communication requires the ability to communicate clearly and concisely, to manage and dispel rumors, and to provide accurate and timely information to patients, families, and staff.

Example a healthcare leader may use crisis communication during a pandemic, by communicating clearly and consistently about the organization's response to the crisis, and by providing accurate and up-to-date information to patients, families, and staff.

- **Feedback and Coaching**: Feedback and coaching are important aspects of effective communication in healthcare, as they allow healthcare leaders to provide constructive feedback to their staff, and to support and mentor staff members in their professional development.

Example a healthcare leader may use feedback and coaching when working with a staff member who is struggling with a particular skill or task, by providing feedback on the areas where the staff member needs improvement, and by offering support and resources to help the staff member improve.

- **Inter professional Communication**: Inter professional communication is critical in healthcare, as healthcare leaders must work closely with other healthcare professionals, including physicians, nurses, therapists, and other staff members, to provide effective patient care. Inter professional communication requires effective communication skills, collaboration, and a shared understanding of patient care goals.

For example, a healthcare leader may use inter professional communication when developing a care plan for a patient, by working with the patient's healthcare team to ensure that everyone involved in the patient's care has a clear understanding of the patient's needs and goals.

Steps to implement resolution to these communication issues:

- **Assess the Current Situati**on: Assessing the current situation involves analyzing the current communication practices and systems within a healthcare organization, and identifying any areas that need improvement. This can include gathering feedback from patients, families, and staff, and reviewing internal processes and systems.

- **Develop a Communication Plan**: Developing a communication plan involve creating a comprehensive strategy for improving communication within a healthcare organization. This can include defining specific goals and objectives, outlining steps to achieve these goals, and identifying resources and stakeholders.
- **Implement Communication Training**: Implementing communication training involves providing education and training for healthcare professionals on effective communication practices, including active listening, conflict resolution, and cultural competence. This training can help healthcare professionals improve their communication skills and avoid future issues.
- **Encourage Open Communication**: Encouraging open communication involves creating a safe and supportive environment where patients, families, and staff feel comfortable sharing their thoughts and ideas. This can involve promoting transparency, encouraging open and honest dialogue, and providing opportunities for patients and families to provide feedback.
- **Foster Collaboration and Teamwork**: Fostering collaboration and teamwork involves promoting inter professional communication, and encouraging a culture of collaboration and cooperation among healthcare professionals. This can involve promoting cross-functional teams, encouraging team-based problem solving, and fostering a sense of shared responsibility among healthcare professionals.
- **Use Technol**ogy: Using technology involves leveraging technology, such as tele health and secure messaging systems, to improve communication and avoid communication issues in healthcare. This can help healthcare organizations improve the speed, accuracy, and efficiency of their communication practices.
- Regular evaluations involve regularly assessing communication practices and systems to identify any areas that need improvement, and to ensure that communication strategies are effective and meeting the needs of patients, families, and staff.
- **Continuously Improving:** Continuously improving communication practices and systems involves continuously striving to improve communication within a healthcare organization. This can involve regularly reassessing communication practices and systems, seeking feedback from patients, families, and staff, and making changes as needed to improve communication and achieve better outcomes for patients and families.

5.2.4: Leadership Issues on Team Work

Activity 5.2.3: case study

In a large hospital, a team of nurses and doctors were assigned to a critical care unit to provide round-the-clock care for critically ill patients. The team consisted of experienced and novice health care professionals, and they had different communication styles, preferences and skills. One day, a patient's condition quickly deteriorated and the team was unable to effectively communicate and coordinate their actions to provide the necessary care. That led to delays in treatment, which ultimately resulted in the patient's death. Despite having a diverse and highly skilled team, staff members were often siloes in their departments and lacked a sense of cohesion and collaboration. This was resulting in increased mistakes in patient care and decreased morale among employees and concerned the hospital leaders.

Discussion questions

1. What was the problem in this case scenario?
2. What measure should hospital leader take?
3. What are the steps/strategies they should follow?

Instruction

Time 25'

Form a group

Give the scenario for the participant

Deliver instruction how they accomplish the task

Prepare and deliver the assignment for large group

Preparation 15' presentation 5'

Leadership **issues related to teamwork in healthcare can arise from a variety of factors.** This includes

- **Lack of clarity in roles and responsibilities**,
- **Poor communication**, resistance to change, lack of trust and cooperation, and conflicting goals and objectives. Some of the common leadership issues in healthcare teamwork
- **Inadequate teamwork and collaboration**: Inadequate teamwork and collaboration can lead to inefficiencies and gaps in patient care, resulting in decreased patient satisfaction and potentially even adverse outcomes.

Example, in a healthcare setting, if team members are not clear on their respective roles and responsibilities, they may duplicate efforts or work at cross-purposes, leading to confusion and miscommunication.

- **Lack of trust and cooperation**: In a healthcare setting, lack of trust and cooperation can lead to disagreements over patient care and treatment plans, potentially hindering the quality of care. For instance, if team members are not willing to trust one another's expertise or opinions, they may be less likely to work together effectively and communicate openly.
- **Resistance to change**: Resistance to change can be a significant barrier to progress in healthcare, especially when it comes to adopting new technologies or processes.

Example: A healthcare team that has been working together for years and is resistant to change may be unwilling to adopt new processes even if they are necessary for improved patient care. This can result in a reluctance to adopt new technology or processes and hinder progress.

- **Ineffective communication**: Ineffective communication can lead to misunderstandings and mistakes, and can also contribute to low morale and poor team performance.

Example in a healthcare setting, if team members are not communicating effectively, they may miss important information or misunderstand one another's instructions, leading to errors in patient care.

- **Conflict resolution**: Conflicts can arise between team members in a healthcare setting and if left unresolved can have a negative impact on team performance and patient care. Leaders must be skilled in resolving conflicts effectively and fairly.

Example by mediating disagreements between team members or using conflict resolution techniques to resolve disputes.

Solution for leadership issue during team work

- **Role clarity and responsibility**: Leaders must be able to clarify each team member's role and responsibilities, which can help to avoid confusion, duplication of effort and miscommunication. This may involve providing regular training or coaching to ensure that everyone on the team understands their role and responsibilities.

- **Encouraging creativity and innovation:** Healthcare teams must be able to embrace change and innovation in order to keep pace with new developments in the field. Leaders must encourage and support creativity and innovation among team members.

- For example, by creating a supportive working environment that fosters collaboration and open communication.

- **Regular team assessments**: Regular team assessments can help to identify areas for improvement and ensure that the team is functioning effectively. Leaders must be able to conduct regular assessments of their team's performance and identify areas for improvement.

- For example, by conducting regular team meetings to discuss progress and make adjustments as necessary.
- **Building morale:** Building morale among team members is essential for improved teamwork and collaboration. Leaders must be able to create a positive and supportive working environment.

- For example, by recognizing and rewarding positive contributions from team members, and actively encouraging and fostering open communication.

- **Encouraging continuous learning and development:** Healthcare is a rapidly evolving field and it is essential that teams are equipped with the skills and knowledge they need to keep pace with new developments. Leaders must encourage and support continuous learning and development among team members.

Example by providing training and support for professional development and ensuring that team members have access to the latest research and technologies.

- **Encouraging collaboration**: Effective teamwork in healthcare requires collaboration between different departments, specialties and professionals. Leaders must be able to encourage and facilitate collaboration across the organization.

Example by breaking down departmental barriers and creating opportunities for inter-departmental communication and collaboration.

- **Empowering team members**: Empowering team members to take ownership of their work can increase motivation and job satisfaction, leading to improved teamwork and better patient outcomes. Leaders must be able to empower team members.

For example, by delegating responsibilities, giving team members autonomy in decision making and providing them with the necessary support and resources to succeed.

- **Creating a positive work culture**: Creating a positive work culture that values teamwork and collaboration is essential for effective teamwork in healthcare. Leaders must be able to foster a culture of trust, respect, and open communication.

For example, by setting expectations for professional conduct, addressing any negativity or toxic behavior and promoting a culture of mutual support and respect.

- **Balancing individual and team goals**: Balancing individual and team goals can be challenging in a healthcare setting. Leaders must be able to balance the needs of individual team members with the overall goals of the team.

For example, by ensuring that team members are able to pursue their own career goals while also contributing to the success of the team.

- **Implementing performance management systems**: Effective performance management systems can help to improve teamwork and collaboration in healthcare. Leaders must be able to implement performance management systems that support individual and team growth. For example, by setting goals and expectations, providing regular feedback and support, and recognizing and rewarding positive performance.

Ways and strategies to implement resolutions to leadership issues during team work

- **Establish clear expectations and goals**: Leaders must be able to establish clear expectations and goals for teamwork in healthcare. This can involve setting specific objectives for team members, establishing team norms and behaviors, and clearly communicating the importance of teamwork and collaboration.
- **Encourage open communication**: Encouraging open communication is key to resolving teamwork issues in healthcare. Leaders must be able to create an environment where team members feel comfortable sharing their thoughts and opinions, for example, by holding regular team meetings and encouraging active participation.
- **Foster a culture of trust**: Leaders must foster a culture of trust, where team members feel comfortable taking risks and collaborating with one another. This can involve building personal

relationships with team members, creating opportunities for team building activities, and promoting an atmosphere of transparency and accountability.

- **Provide training and development opportunities**: Providing training and development opportunities for team members can help to improve teamwork and collaboration in healthcare. for example, by offering training and mentorship programs, providing regular feedback and coaching, and encouraging ongoing learning and professional development.
- **Promote teamwork and collaboration**: Leaders must be able to promote teamwork and collaboration in healthcare by leading by example, for example, by modeling the behavior they want to see in others, and rewarding positive teamwork behaviors.
- **Encourage collaboration across departments**: Leaders must be able to encourage collaboration across different departments, specialties, and professionals. This can involve creating inter-departmental communication and collaboration initiatives, breaking down departmental barriers, and promoting cross-functional teamwork.
- **Address conflicts and resolve disputes**: Leaders must be able to address conflicts and resolve disputes effectively. This may involve mediating disagreements, providing guidance and support, and promoting a culture of respect and open communication.
- **Monitor progress and adjust strategies**: Leaders must be able to monitor progress and adjust strategies as needed to ensure that teamwork and collaboration initiatives are effective and achieving desired outcomes. This can involve regularly evaluating team performance, seeking feedback from team members, and making changes as needed to improve teamwork and collaboration

5.2.5: Leadership Issues on Collaboration

Activity 5.2.4: Case scenario

Case

Dr. James, the charismatic and visionary chief medical officer of the hospital, was concerned by the growing number of patient complaints and the low levels of staff morale. He realized that there is problem in his hospital among staff and

Dr. James was determined to turn things around and make the hospital a better place for patients and staff alike. He began by embarking on a listening tour, visiting different departments and speaking with staff members about their experiences and challenges.

As he listened to their stories, Dr. James discovered that silos had developed between different departments, leading to a lack of communication and coordination. Staff members from different departments felt isolated and disconnected from each other, and many felt that their contributions were not valued or recognized.

Discussion questions

1. What measure should Dr.James take?

3. What are the steps/strategies he should follow?

Instruction

Time 25'

Form a group

Give the scenario for the participant

Deliver instruction how they accomplish the task

Prepare and deliver the assignment for large group

Preparation 15' presentation 5'

5.2.6: Leadership Issues on Collaboration

Leadership issues on collaboration refer to the challenges and difficulties that leaders face in promoting and facilitating effective collaboration among healthcare professionals. **Some common leadership issues on collaboration include**

- **Silos and turf wars**: Healthcare organizations are often comprised of different departments and specialties, leading to a lack of collaboration and competition between teams.

- For example, a hospital may have separate departments for cardiology, oncology, and orthopedics. Each department may focus on their own patients and services, leading to competition rather than collaboration.

- **Resistance to interdisciplinary teamwork:** Collaboration between different healthcare professionals, such as doctors, nurses, and support staff, can be challenging, as each may have their own ways of working and different priorities.

- For example, a doctor may prioritize a patient's diagnosis, while a nurse may prioritize the patient's comfort. If these professionals are not communicating effectively, their priorities may clash and hinder their ability to provide the best care.

- **Misaligned goals:** Different healthcare professionals may have different goals and objectives, leading to a lack of alignment and collaboration.

- **For example**, a doctor may prioritize achieving a cure for a patient, while a nurse may prioritize keeping the patient comfortable and pain-free. If these goals are not aligned, they may work at cross-purposes and negatively impact the patient's outcome.

- **Limited resources**: Collaboration in healthcare often requires significant resources, including funding, personnel, and technology. A lack of these resources can limit the effectiveness of collaboration efforts.

- **For example**, a hospital may not have enough funding to invest in a new electronic health record system, limiting the ability of healthcare professionals to share patient information and collaborate effectively.

- **Inadequate communication:** Communication is crucial in healthcare, but miscommunication or lack of communication can result in medical errors, patient harm, and increased costs.

- For example, a nurse may not communicate changes in a patient's condition to the doctor, leading to delayed treatment or incorrect medication.

- **Cultural barriers:** Healthcare professionals come from different backgrounds and may have different cultural perspectives and beliefs. These differences can limit collaboration and hinder effective teamwork.

- For example, a doctor from a Western cultural background may prioritize evidence-based medicine, while a nurse from an Eastern cultural background may prioritize traditional healing practices. If these professionals do not understand and respect each other's perspectives, they may struggle to collaborate effectively.

- **Inefficient processes:** Collaboration in healthcare can be hindered by outdated processes and systems, leading to duplication of efforts and decreased efficiency.

- For example, a hospital may use paper-based medical records, leading to difficulties in sharing patient information and a delay in decision making.

- **Inadequate allocation of resources:** Collaboration between healthcare professionals requires adequate allocation of resources such as staff, equipment, and funding. When resources are limited or not distributed fairly, it can lead to resentment and difficulties in collaboration.

- **Conflicting priorities**: Health care professionals may have different priorities or goals which can cause friction and challenges in collaboration.

- For example, a nurse may prioritize patient comfort while a doctor may prioritize efficient treatment.

- **Different work styles:** Different work styles among healthcare professionals can also create challenges in collaboration.

• For example, some healthcare professionals may prefer a more structured and systematic approach, while others may prefer a more flexible and creative approach.

- **Lack of trust**: A lack of trust between healthcare professionals can create challenges in collaboration.

• For example, a nurse may distrust the judgment of a doctor, or a doctor may distrust the judgment of a nurse.

- **Resistance to change**: Resistance to change can also impact collaboration among healthcare professionals.

• For example, healthcare professionals may be resistant to adopting new technologies or processes that can improve collaboration.

Ways and strategies to implement resolutions to leadership issues during collaboration

- **Resource allocation**: To resolve issues of inadequate resource allocation, healthcare organizations can establish clear guidelines and protocols for the allocation of resources, ensuring that they are distributed fairly.
- **Prioritization**: To resolve conflicting priorities, healthcare organizations can establish a clear set of goals and priorities that align with the overall mission of the organization. This can help ensure that all healthcare professionals are working towards a common goal.
- **Work style diversity**: To resolve differences in work styles, healthcare organizations can provide training and development opportunities for healthcare professionals to learn about and appreciate different work styles. They can also create a work environment that is inclusive and supportive of diverse work styles.
- **Communication barriers:** To resolve communication barriers, healthcare organizations can provide training and support for effective communication, including language and cultural sensitivity training.

- **Trust building**: To resolve issues of a lack of trust, healthcare organizations can establish trust-building initiatives, such as team building activities and open forums for discussion and feedback.
- Collaboration incentives: To encourage collaboration, healthcare organizations can establish a system of rewards and recognition for team members who demonstrate exceptional collaboration skills.
- **Conflict resolution:** To resolve conflicts, healthcare organizations can provide training and resources for conflict resolution, such as mediation and negotiation skills. They can also establish a clear process for resolving conflicts in a fair and timely manner.
- **Shared decision-making**: To resolve issues with decision-making, healthcare organizations can establish a process for shared decision-making that involves all stakeholders, including patients and their families.
- **Data sharin**g: To resolve issues with data sharing, healthcare organizations can establish policies and protocols for sharing data, such as electronic health records, that ensure the privacy and security of patient information.
- **Leadership training**: To address leadership issues, healthcare organizations can provide training and development opportunities for healthcare leaders to improve their leadership skills, such as decision-making, communication, and collaboration skills.

Summary

- These leadership issues can be complex and difficult to resolve, but effective leaders must be able to address them in order to ensure the success of their organizations. They may need to seek support, seek feedback, and continuously learn and improve their leadership skills in order to overcome these challenges.

Session 5.3: Tools or protocols for effective communication, for team working, for Collaboration:

Session duration: 45’

Session objective

At the end of this session participant will be able to

- Identify different tools/protocols for effective communication, collaboration and team working
- Select proper tool/protocol for effective communication collaboration and team working

Activity 5.3.1: think pair share

Questions

1. What tools/protocols do you use for communication in your organization?
2. Explain their purpose/importance in collaboration and team working

Instruction

Time 15'

Ask participants to think on the questions individually for 2'

Again ask participants to make pair of 5 participant and discuss their answer on the questions for 5'

Finally pause the discussion and ask participants to shear there answer for the whole group for 5'

Tools/protocols for effective communication collaboration and team working

- **Tele health platforms**: Tele health platforms allow healthcare providers to consult with patients remotely using audio, video, and sometimes real-time data. This can improve access to care, reduce the need for in-person visits, and improve patient outcomes.

- **Secure messaging apps**: Secure messaging apps provide healthcare professionals with a confidential and secure way to communicate with colleagues and patients. They help to ensure that sensitive patient information is protected and only shared with authorized individuals.
- **Clinical documentation systems**: Clinical documentation systems provide healthcare teams with a centralized platform to document patient care electronically. This helps to ensure that patient information is accurate and accessible, reducing the risk of errors and improving quality of care.
- **Video conferencing**: Video conferencing tools allow healthcare professionals to meet and communicate in real-time, even when working remotely.
- Electronic health record (EHR) systems: EHRs are digital records of patient health information. They provide a centralized platform for healthcare teams to access and share patient information, reducing the risk of errors and increasing efficiency.
- **Healthcare information exchange (HIE**): HIEs allow healthcare organizations to securely exchange patient information, reducing the risk of errors and increasing efficiency. They help to ensure that all members of a patient's care team have access to the most up-to-date information.
- **Secure file sharing and collaboration platforms**: These platforms allow healthcare teams to store and share files securely, making it easier for teams to collaborate and access information.
- **Process improvement methodologies**: help healthcare organizations to identify and eliminate waste and inefficiencies in their processes, improving quality and efficiency.
- **Interdisciplinary team huddles or stand-up meetings:** Regular interdisciplinary team meetings bring together healthcare teams from different disciplines to discuss patient care and treatment plans. They help to ensure that all members of a patient's care team are on the same page and working towards the same goals.
- **Clinical decision support systems**: Clinical decision support systems provide healthcare professionals with real-time, evidence-based recommendations for patient care. They help to improve quality of care and reduce the risk of medical errors

Summary questions

1. What are the different type of tool/protocol used during communication collaboration and team working?
2. Explain the importance of communication collaboration and team working tool/protocol for health institutions?

Session 5.4: Monitoring and evaluating during communication collaboration and team working:

Duration: 30'

Session Objective

At the end of the session the participants will be able to

To improve the effectiveness and efficiency of team communication, collaboration, and patient care by regularly monitoring and evaluating the performance of healthcare teams.

To identify areas for improvement and enhance the overall quality of healthcare services by implementing evidence-based strategies for monitoring and evaluating team communication, collaboration, and patient care outcomes.

5.4.1: Monitoring and evaluation during team working

- **Clinical outcomes tracking**: Clinical outcomes tracking involve monitoring and evaluating the health outcomes of patients, such as recovery rates and mortality rates, to evaluate the effectiveness of health care services and treatments.
- **Patient satisfaction surveys**: Patient satisfaction surveys are used to evaluate the experience of patients with health care services and the effectiveness of health care teams. The feedback provided by patients can be used to identify areas for improvement and to enhance patient-centered care.
- **Medical error reporting and analysis**: Medical error reporting and analysis involves the systematic collection and analysis of data on medical errors. This information is used to identify areas for improvement and to prevent future medical errors.
- **Adherence to protocols and guidelines**: Adherence to protocols and guidelines involves monitoring and evaluating the extent to which health care professionals follow established protocols and guidelines for patient care. This information is used to ensure that patients receive the best possible care and to identify areas for improvement.
- **Regular team performance evaluations**: Regular team performance evaluations involve evaluating the effectiveness of health care teams and the individuals within those teams. This information is used to identify areas for improvement and to ensure that health care teams are functioning effectively.

- **Time management and efficiency analysis**: Time management and efficiency analysis involves monitoring and evaluating the use of time by health care teams and individuals to identify areas for improvement and to enhance productivity.
- **Quality improvement initiatives**: Quality improvement initiatives involve implementing strategies and programs to enhance the quality of health care services. The effectiveness of these initiatives is monitored and evaluated to identify areas for improvement and to ensure that patients receive the best possible care.
- **Root cause analysis of medical incidents**: Root cause analysis of medical incidents involves investigating and analyzing the underlying causes of adverse events in health care. This information is used to identify areas for improvement and to prevent future incidents.
- **Multidisciplinary team collaboration evaluations**: Multidisciplinary team collaboration evaluations involve evaluating the effectiveness of inter-professional collaboration in health care.
- **Data analysis of patient outcomes and health care utilization**: Data analysis of patient outcomes and health care utilization involves analyzing data on patient outcomes and health care utilization to evaluate the effectiveness of health care services and to identify areas for improvement. This information can also be used to inform decisions about health care resource allocation.

5.4.2: Monitoring and evaluating during effective communication:

- **Feedback from team members**: Gathering feedback from team members on the effectiveness of communication is a key part of monitoring and evaluating communication within a team. This feedback can help identify areas for improvement and enhance overall team communication.
- **Regular team meetings and check-ins**: Regular team meetings and check-ins can help to foster open and effective communication within a team. These check-ins provide an opportunity for team members to discuss their work and any challenges they are facing.
- **Recording and reviewing of team communications**: Recording and reviewing team communications, such as emails and meeting minutes, can help to ensure that all team members have a clear understanding of what was discussed and any actions that need to be taken.
- **Surveys and questionnaires**: Surveys and questionnaires can be used to gather feedback from team members on the effectiveness of communication within the team. This information can be used to identify areas for improvement and enhance overall team communication.

- **Evaluating team dynamics and cohesiveness**: Evaluating the dynamics and cohesiveness of a team can help to identify any communication breakdowns or conflicts that may be affecting the effectiveness of the team.
- **Documentation of team goals and progress**: Documentation of team goals and progress can help to ensure that all team members have a clear understanding of the team's objectives and how their work fits into the larger picture.
- **Timely resolution of conflicts and misunderstandings**: Resolving conflicts and misunderstandings in a timely manner is critical to maintaining effective communication within a team. This can help to prevent small issues from becoming major problems and negatively impacting the team's effectiveness.
- **Celebrating team successes and milestones**: Celebrating team successes and milestones can help to foster positive team dynamics and enhance overall communication. This can also help to build trust and improve team cohesiveness.
- **Review of team communication policies and procedures**: Reviewing and updating team communication policies and procedures can help to ensure that all team members have a clear understanding of how to communicate effectively and avoid misunderstandings.
- **Assessing the impact of team communication on patient outcomes and satisfaction:** Assessing the impact of team communication on patient outcomes and satisfaction can help to determine the effectiveness of communication within the team. This information can be used to identify areas for improvement and enhance overall team communication.

5.4.3: Monitoring and evaluating during team collaboration:

- **Regular progress updates**: Regular progress updates can help to ensure that all team members are on the same page and aware of the progress of the project.
- **Assessing team dynamics and cohesiveness**: Assessing the dynamics and cohesiveness of the team can help to identify any communication breakdowns or conflicts that may be affecting collaboration.
- **Evaluation of teamwork processes**: Evaluating the processes used by the team to work together can help to identify areas for improvement and enhance overall collaboration.
- **Feedback from team members**: Gathering feedback from team members on the effectiveness of collaboration can help to identify areas for improvement and enhance overall team collaboration.
- **Documenting team goals and progress**: Documenting team goals and progress can help to ensure that all team members have a clear understanding of the project's objectives and how their work fits into the larger picture.

- **Resolution of conflicts and misunderstandings**: Resolving conflicts and misunderstandings in a timely manner is critical to maintaining effective collaboration within a team.
- **Celebrating team successes and milestones**: Celebrating team successes and milestones can help to foster positive team dynamics and enhance overall collaboration.
- **Review of collaboration policies and procedures**: Reviewing and updating collaboration policies and procedures can help to ensure that all team members have a clear understanding of how to collaborate effectively and avoid misunderstandings.
- **Measuring the impact of collaboration on patient outcomes and satisfaction**: Measuring the impact of collaboration on patient outcomes and satisfaction can help to determine the effectiveness of collaboration within the team.
- **Regular team meetings and check-ins:** Regular team meetings and check-ins can help to foster open and effective collaboration within a team. This check-ins provide an opportunity for team members to discuss their work and any challenges they are facing.

Summary questions

1. Compare and contrast monitoring and evaluation during communication, collaboration and team work?
2. Discuss importance of monitoring and evaluation during communication, collaboration and team working?

Annex
